## • SAFETY PRECAUTIONS •

(Read these precautions before using this product.)

Before using this product, please read this manual and the relevant manuals carefully and pay full attention to safety to handle the product correctly.

The precautions given in this manual are concerned with this product only. For the safety precautions of the programmable controller system, refer to the user's manual for the CPU module used.

In this manual, the safety precautions are classified into two levels: "⚠WARNING" and "⚠CAUTION".

**WARNING**

Indicates that incorrect handling may cause hazardous conditions, resulting in death or severe injury.

**CAUTION**

Indicates that incorrect handling may cause hazardous conditions, resulting in minor or moderate injury or property damage.

Under some circumstances, failure to observe the precautions given under "⚠CAUTION" may lead to serious consequences.

Observe the precautions of both levels because they are important for personal and system safety.

Make sure that the end users read this manual and then keep the manual in a safe place for future reference.

### [Design Precautions]

#### **WARNING**

- Provide a safety circuit outside the programmable controller so that the entire system will operate safely even when an external power supply error or programmable controller fault occurs.

Failure to observe this could lead to accidents for incorrect outputs or malfunctioning.

- (1) Configure an emergency stop circuit and interlock circuit such as a positioning upper limit/lower limit to prevent mechanical damage outside the programmable controller.
- (2) The machine OPR operation is controlled by the OPR direction and OPR speed data. Deceleration starts when the near-point dog turns ON. Thus, if the OPR direction is incorrectly set, deceleration will not start and the machine will continue to travel. Configure an interlock circuit to prevent mechanical damage outside the programmable controller.
- (3) When the module detects an error, normally deceleration stop or sudden stop will take place according to the parameter stop group settings.  
Set the parameters to the positioning system specifications.  
Make sure that the OPR parameter and positioning data are within the parameter setting values.

## [Design Precautions]

### CAUTION

- Do not bundle or adjacently lay the connection cable connected to the module external I/O signals or drive unit with the main circuit line, power line, or the load line other than that for the programmable controller. Separate these by 100mm as a guide. Failure to observe this could lead to malfunctioning caused by noise, surge, or induction.

## [Security Precautions]

### WARNING

- To maintain the security (confidentiality, integrity, and availability) of the programmable controller and the system against unauthorized access, denial-of-service (DoS) attacks, computer viruses, and other cyberattacks from external devices via the network, take appropriate measures such as firewalls, virtual private networks (VPNs), and antivirus solutions.

## [Mounting Precautions]

### CAUTION

- Use the programmable controller in an environment that meets the general specifications contained in QCPU User's Manual(Hardware Design, Maintenance and Inspection) to use. Using this programmable controller in an environment outside the range of the general specifications may cause electric shock, fire, malfunction, and damage to or deterioration of the product.
- While pressing the installation lever located at the bottom of module, insert the module fixing tab into the fixing hole in the base unit until it stops. Then, securely mount the module with the fixing hole as a supporting point.  
Incorrect loading of the module can cause a malfunction, failure or drop.  
When using the programmable controller in the environment of much vibration, tighten the module with a screw.  
Tighten the screw in the specified torque range.  
Undertightening can cause a drop, short circuit or malfunction.  
Overtightening can cause a drop, short circuit or malfunction due to damage to the screw or module.
- Completely turn off the externally supplied power used in the system before mounting or removing the module.  
Not doing so may damage the product.

## [Wiring Precautions]

### WARNING

- Always confirm the terminal layout before connecting the wires to the module.

## [Wiring Precautions]

### CAUTION

- Use applicable solderless terminals and tighten them within the specified torque range. If any spade solderless terminal is used, it may be disconnected when the terminal screw comes loose, resulting in failure.
- Tighten the connector screws within the specified torque range.  
Undertightening can cause short circuit, fire, or malfunction.  
Overtightening can damage the screw and/or module, resulting in drop, short circuit, fire, or malfunction.
- Connectors for external devices must be crimped with the tool specified by the manufacturer, or must be correctly soldered. Incomplete connections may cause short circuit, fire, or malfunction.
- When disconnecting the cable from the module, do not pull the cable by the cable part.  
For the cable with connector, hold the connector part of the cable.  
Pulling the cable connected to the module may result in malfunction or damage to the module or cable.
- Prevent foreign matter such as dust or wire chips from entering the module. Such foreign matter can cause a fire, failure, or malfunction.
- A protective film is attached to the top of the module to prevent foreign matter, such as wire chips, from entering the module during wiring. Do not remove the film during wiring. Remove it for heat dissipation before system operation.

## [Startup/Maintenance Precautions]

### WARNING

- Completely turn off the externally supplied power used in the system before cleaning or tightening the screws.  
Failure to turn all phases OFF could lead to electric shocks.

## [Startup/Maintenance Precautions]

### CAUTION

- Never disassemble or modify the module.  
Failure to observe this could lead to trouble, malfunctioning, injuries or fires.
- Completely turn off the externally supplied power used in the system before installing or removing the module.  
Failure to turn all phases OFF could lead to module trouble or malfunctioning.
- Do not install/remove the module to/from the base unit, or the terminal block to/from the module more than 50 times after the first use of the product. (IEC 61131-2 compliant)  
Failure to do so may cause malfunction.
- Before starting test operation, set the parameter speed limit value to the slowest value, and make sure that operation can be stopped immediately if a hazardous state occurs.
- Always make sure to touch the grounded metal to discharge the electricity charged in the body, etc., before touching the module.  
Failure to do so may cause a failure or malfunctions of the module.

## [Precautions for use]

### CAUTION

- Note that when the reference axis speed is designated for interpolation operation, the speed of the partner axis (2nd axis, 3rd axis and 4th axis) may be larger than the set speed (larger than the speed limit value).

## [Disposal Precautions]

### CAUTION

- When disposing of the product, handle it as industrial waste.

## • CONDITIONS OF USE FOR THE PRODUCT •

(1) MELSEC programmable controller ("the PRODUCT") shall be used in conditions;

i) where any problem, fault or failure occurring in the PRODUCT, if any, shall not lead to any major or serious accident; and

ii) where the backup and fail-safe function are systematically or automatically provided outside of the PRODUCT for the case of any problem, fault or failure occurring in the PRODUCT.

(2) The PRODUCT has been designed and manufactured for the purpose of being used in general industries.

MITSUBISHI ELECTRIC SHALL HAVE NO RESPONSIBILITY OR LIABILITY (INCLUDING, BUT NOT LIMITED TO ANY AND ALL RESPONSIBILITY OR LIABILITY BASED ON CONTRACT, WARRANTY, TORT, PRODUCT LIABILITY) FOR ANY INJURY OR DEATH TO PERSONS OR LOSS OR DAMAGE TO PROPERTY CAUSED BY the PRODUCT THAT ARE OPERATED OR USED IN APPLICATION NOT INTENDED OR EXCLUDED BY INSTRUCTIONS, PRECAUTIONS, OR WARNING CONTAINED IN MITSUBISHI ELECTRIC USER'S, INSTRUCTION AND/OR SAFETY MANUALS, TECHNICAL BULLETINS AND GUIDELINES FOR the PRODUCT.

("Prohibited Application")

Prohibited Applications include, but not limited to, the use of the PRODUCT in;

- Nuclear Power Plants and any other power plants operated by Power companies, and/or any other cases in which the public could be affected if any problem or fault occurs in the PRODUCT.
- Railway companies or Public service purposes, and/or any other cases in which establishment of a special quality assurance system is required by the Purchaser or End User.
- Aircraft or Aerospace, Medical applications, Train equipment, transport equipment such as Elevator and Escalator, Incineration and Fuel devices, Vehicles, Manned transportation, Equipment for Recreation and Amusement, and Safety devices, handling of Nuclear or Hazardous Materials or Chemicals, Mining and Drilling, and/or other applications where there is a significant risk of injury to the public or property.

Notwithstanding the above restrictions, Mitsubishi Electric may in its sole discretion, authorize use of the PRODUCT in one or more of the Prohibited Applications, provided that the usage of the PRODUCT is limited only for the specific applications agreed to by Mitsubishi Electric and provided further that no special quality assurance or fail-safe, redundant or other safety features which exceed the general specifications of the PRODUCTS are required. For details, please contact the Mitsubishi Electric representative in your region.

(3) Mitsubishi Electric shall have no responsibility or liability for any problems involving programmable controller trouble and system trouble caused by DoS attacks, unauthorized access, computer viruses, and other cyberattacks.

# REVISIONS

\* The manual number is given on the bottom left of the back cover.

Japanese Manual Version SH-080047-AB

This manual confers no industrial property rights or any rights of any other kind, nor does it confer any patent licenses. Mitsubishi Electric Corporation cannot be held responsible for any problems involving industrial property rights which may occur as a result of using the contents noted in this manual.

## INTRODUCTION

Thank you for purchasing the Mitsubishi Electric general-purpose programmable controller MELSEC-Q Series. Always read through this manual, and fully comprehend the functions and performance of the Q Series programmable controller before starting use to ensure correct usage of this product. When applying the program examples provided in this manual to an actual system, ensure the applicability and confirm that it will not cause system control problems. Please make sure that the end users read this manual.

### PART 1 PRODUCT SPECIFICATIONS AND HANDLING

|                    |               |
|--------------------|---------------|
| 1. PRODUCT OUTLINE | 1- 1 to 1- 24 |
|--------------------|---------------|

|                                                                            |       |
|----------------------------------------------------------------------------|-------|
| 1.1 Positioning control .....                                              | 1- 2  |
| 1.1.1 Features of QD75 .....                                               | 1- 2  |
| 1.1.2 Purpose and applications of positioning control .....                | 1- 5  |
| 1.1.3 Mechanism of positioning control .....                               | 1- 7  |
| 1.1.4 Outline design of positioning system .....                           | 1- 9  |
| 1.1.5 Communicating signals between QD75 and each module .....             | 1- 12 |
| 1.2 Flow of system operation .....                                         | 1- 15 |
| 1.2.1 Flow of all processes .....                                          | 1- 15 |
| 1.2.2 Outline of starting .....                                            | 1- 18 |
| 1.2.3 Outline of stopping .....                                            | 1- 20 |
| 1.2.4 Outline of restarting .....                                          | 1- 22 |
| 1.3 Restrictions on using a stepping motor .....                           | 1- 23 |
| 1.4 Function additions/modifications according to function version B ..... | 1- 23 |

|                         |               |
|-------------------------|---------------|
| 2. SYSTEM CONFIGURATION | 2- 1 to 2- 10 |
|-------------------------|---------------|

|                                                           |      |
|-----------------------------------------------------------|------|
| 2.1 General image of system .....                         | 2- 2 |
| 2.2 Configuration list .....                              | 2- 4 |
| 2.3 Applicable system .....                               | 2- 6 |
| 2.4 How to check the function version and SERIAL No. .... | 2- 8 |

|                                        |                      |
|----------------------------------------|----------------------|
| <b>3. SPECIFICATIONS AND FUNCTIONS</b> | <b>3- 1 to 3- 30</b> |
|----------------------------------------|----------------------|

|                                                                           |       |
|---------------------------------------------------------------------------|-------|
| 3.1 Performance specifications.....                                       | 3- 2  |
| 3.2 List of functions .....                                               | 3- 6  |
| 3.2.1 QD75 control functions.....                                         | 3- 6  |
| 3.2.2 QD75 main functions.....                                            | 3- 8  |
| 3.2.3 QD75 sub functions and common functions .....                       | 3- 10 |
| 3.2.4 Combination of QD75 main functions and sub functions.....           | 3- 14 |
| 3.3 Specifications of input/output signals with CPU module.....           | 3- 16 |
| 3.3.1 List of input/output signals with CPU module .....                  | 3- 16 |
| 3.3.2 Details of input signals (QD75 → CPU module).....                   | 3- 17 |
| 3.3.3 Details of output signals (CPU module → QD75).....                  | 3- 18 |
| 3.4 Specifications of input/output interfaces with external devices ..... | 3- 19 |
| 3.4.1 Electrical specifications of input/output signals .....             | 3- 19 |
| 3.4.2 Signal layout for external device connection connector.....         | 3- 25 |
| 3.4.3 List of input/output signal details.....                            | 3- 26 |
| 3.4.4 Input/output interface internal circuit.....                        | 3- 28 |

|                                                               |                      |
|---------------------------------------------------------------|----------------------|
| <b>4. INSTALLATION, WIRING AND MAINTENANCE OF THE PRODUCT</b> | <b>4- 1 to 4- 16</b> |
|---------------------------------------------------------------|----------------------|

|                                                                      |       |
|----------------------------------------------------------------------|-------|
| 4.1 Outline of installation, wiring and maintenance.....             | 4- 2  |
| 4.1.1 Installation, wiring and maintenance procedures.....           | 4- 2  |
| 4.1.2 Names of each part.....                                        | 4- 3  |
| 4.1.3 Handling precautions .....                                     | 4- 5  |
| 4.2 Installation .....                                               | 4- 7  |
| 4.2.1 Installation precautions .....                                 | 4- 7  |
| 4.3 Wiring.....                                                      | 4- 8  |
| 4.3.1 Wiring precautions.....                                        | 4- 8  |
| 4.3.2 Wiring of the differential driver common terminal.....         | 4- 14 |
| 4.4 Checking installation and wiring .....                           | 4- 15 |
| 4.4.1 Items to check when installation and wiring are completed..... | 4- 15 |
| 4.5 Maintenance.....                                                 | 4- 16 |
| 4.5.1 Maintenance precautions.....                                   | 4- 16 |
| 4.5.2 Disposal precautions.....                                      | 4- 16 |

|                                             |                      |
|---------------------------------------------|----------------------|
| <b>5. DATA USED FOR POSITIONING CONTROL</b> | <b>5- 1 to 5-134</b> |
|---------------------------------------------|----------------------|

|                                                      |       |
|------------------------------------------------------|-------|
| 5.1 Types of data.....                               | 5- 2  |
| 5.1.1 Parameters and data required for control.....  | 5- 2  |
| 5.1.2 Setting items for positioning parameters ..... | 5- 5  |
| 5.1.3 Setting items for OPR parameters.....          | 5- 7  |
| 5.1.4 Setting items for positioning data.....        | 5- 8  |
| 5.1.5 Setting items for block start data .....       | 5- 10 |
| 5.1.6 Setting items for condition data .....         | 5- 11 |
| 5.1.7 Types and roles of monitor data .....          | 5- 12 |
| 5.1.8 Types and roles of control data .....          | 5- 15 |

|                                     |       |
|-------------------------------------|-------|
| 5.2 List of parameters .....        | 5- 18 |
| 5.2.1 Basic parameters 1 .....      | 5- 18 |
| 5.2.2 Basic parameters 2 .....      | 5- 24 |
| 5.2.3 Detailed parameters 1 .....   | 5- 26 |
| 5.2.4 Detailed parameters 2 .....   | 5- 36 |
| 5.2.5 OPR basic parameters.....     | 5- 45 |
| 5.2.6 OPR detailed parameters ..... | 5- 52 |
| 5.3 List of positioning data .....  | 5- 56 |
| 5.4 List of block start data .....  | 5- 74 |
| 5.5 List of condition data .....    | 5- 80 |
| 5.6 List of monitor data.....       | 5- 86 |
| 5.6.1 System monitor data .....     | 5- 86 |
| 5.6.2 Axis monitor data.....        | 5- 96 |
| 5.7 List of control data .....      | 5-110 |
| 5.7.1 System control data .....     | 5-110 |
| 5.7.2 Axis control data .....       | 5-114 |

|                                                         |                      |
|---------------------------------------------------------|----------------------|
| <b>6. SEQUENCE PROGRAM USED FOR POSITIONING CONTROL</b> | <b>6- 1 to 6- 46</b> |
|---------------------------------------------------------|----------------------|

|                                                   |       |
|---------------------------------------------------|-------|
| 6.1 Precautions for creating program .....        | 6- 2  |
| 6.2 List of devices used.....                     | 6- 5  |
| 6.3 Creating a program .....                      | 6- 11 |
| 6.3.1 General configuration of program .....      | 6- 11 |
| 6.3.2 Positioning control operation program.....  | 6- 12 |
| 6.4 Positioning program examples .....            | 6- 15 |
| 6.5 Program details .....                         | 6- 25 |
| 6.5.1 Initialization program .....                | 6- 25 |
| 6.5.2 Start details setting program .....         | 6- 26 |
| 6.5.3 Start program.....                          | 6- 28 |
| 6.5.4 Continuous operation interrupt program..... | 6- 38 |
| 6.5.5 Restart program .....                       | 6- 40 |
| 6.5.6 Stop program.....                           | 6- 44 |

|                                                 |                      |
|-------------------------------------------------|----------------------|
| <b>7. MEMORY CONFIGURATION AND DATA PROCESS</b> | <b>7- 1 to 7- 12</b> |
|-------------------------------------------------|----------------------|

|                                                   |      |
|---------------------------------------------------|------|
| 7.1 Configuration and roles of QD75 memory .....  | 7- 2 |
| 7.1.1 Configuration and roles of QD75 memory..... | 7- 2 |
| 7.1.2 Buffer memory area configuration .....      | 7- 5 |
| 7.2 Data transmission process .....               | 7- 6 |

## PART 2 CONTROL DETAILS AND SETTING

### 8. OPR CONTROL 8- 1 to 8- 24

|                                                   |       |
|---------------------------------------------------|-------|
| 8.1 Outline of OPR control .....                  | 8- 2  |
| 8.1.1 Two types of OPR control .....              | 8- 2  |
| 8.2 Machine OPR .....                             | 8- 4  |
| 8.2.1 Outline of the machine OPR operation .....  | 8- 4  |
| 8.2.2 Machine OPR method .....                    | 8- 5  |
| 8.2.3 OPR method (1): Near-point dog method ..... | 8- 7  |
| 8.2.4 OPR method (2): Stopper method 1) .....     | 8- 9  |
| 8.2.5 OPR method (3): Stopper method 2) .....     | 8- 12 |
| 8.2.6 OPR method (4): Stopper method 3) .....     | 8- 15 |
| 8.2.7 OPR method (5): Count method 1) .....       | 8- 17 |
| 8.2.8 OPR method (6): Count method 2) .....       | 8- 20 |
| 8.3 Fast OPR .....                                | 8- 23 |
| 8.3.1 Outline of the fast OPR operation .....     | 8- 23 |

### 9. MAJOR POSITIONING CONTROL 9- 1 to 9-140

|                                                                                  |       |
|----------------------------------------------------------------------------------|-------|
| 9.1 Outline of major positioning controls .....                                  | 9- 2  |
| 9.1.1 Data required for major positioning control .....                          | 9- 4  |
| 9.1.2 Operation patterns of major positioning controls .....                     | 9- 5  |
| 9.1.3 Designating the positioning address .....                                  | 9- 16 |
| 9.1.4 Confirming the current value .....                                         | 9- 17 |
| 9.1.5 Control unit "degree" handling .....                                       | 9- 19 |
| 9.1.6 Interpolation control .....                                                | 9- 23 |
| 9.2 Setting the positioning data .....                                           | 9- 29 |
| 9.2.1 Relation between each control and positioning data .....                   | 9- 29 |
| 9.2.2 1-axis linear control .....                                                | 9- 31 |
| 9.2.3 2-axis linear interpolation control .....                                  | 9- 33 |
| 9.2.4 3-axis linear interpolation control .....                                  | 9- 37 |
| 9.2.5 4-axis linear interpolation control .....                                  | 9- 43 |
| 9.2.6 1-axis fixed-feed control .....                                            | 9- 47 |
| 9.2.7 2-axis fixed-feed control (interpolation) .....                            | 9- 49 |
| 9.2.8 3-axis fixed-feed control (interpolation) .....                            | 9- 52 |
| 9.2.9 4-axis fixed-feed control (interpolation) .....                            | 9- 57 |
| 9.2.10 2-axis circular interpolation control with sub point designation .....    | 9- 60 |
| 9.2.11 2-axis circular interpolation control with center point designation ..... | 9- 66 |
| 9.2.12 3-axis helical interpolation control with sub point designation .....     | 9- 74 |
| 9.2.13 3-axis helical interpolation control with center point designation .....  | 9- 82 |
| 9.2.14 1-axis speed control .....                                                | 9- 91 |
| 9.2.15 2-axis speed control .....                                                | 9- 94 |
| 9.2.16 3-axis speed control .....                                                | 9- 97 |
| 9.2.17 4-axis speed control .....                                                | 9-101 |
| 9.2.18 Speed-position switching control (INC mode) .....                         | 9-106 |
| 9.2.19 Speed-position switching control (ABS mode) .....                         | 9-115 |

|                                               |       |
|-----------------------------------------------|-------|
| 9.2.20 Position-speed switching control ..... | 9-123 |
| 9.2.21 Current value changing .....           | 9-130 |
| 9.2.22 NOP instruction .....                  | 9-135 |
| 9.2.23 JUMP instruction .....                 | 9-136 |
| 9.2.24 LOOP .....                             | 9-138 |
| 9.2.25 LEND .....                             | 9-139 |

|                                           |                        |
|-------------------------------------------|------------------------|
| <b>10. HIGH-LEVEL POSITIONING CONTROL</b> | <b>10- 1 to 10- 28</b> |
|-------------------------------------------|------------------------|

|                                                                            |        |
|----------------------------------------------------------------------------|--------|
| 10.1 Outline of high-level positioning control .....                       | 10- 2  |
| 10.1.1 Data required for high-level positioning control .....              | 10- 3  |
| 10.1.2 "Block start data" and "condition data" configuration .....         | 10- 4  |
| 10.2 High-level positioning control execution procedure .....              | 10- 6  |
| 10.3 Setting the block start data .....                                    | 10- 7  |
| 10.3.1 Relation between various controls and block start data .....        | 10- 7  |
| 10.3.2 Block start (normal start) .....                                    | 10- 8  |
| 10.3.3 Condition start .....                                               | 10- 10 |
| 10.3.4 Wait start .....                                                    | 10- 11 |
| 10.3.5 Simultaneous start .....                                            | 10- 12 |
| 10.3.6 Repeated start (FOR loop) .....                                     | 10- 14 |
| 10.3.7 Repeated start (FOR condition) .....                                | 10- 15 |
| 10.3.8 Restrictions when using the NEXT start .....                        | 10- 16 |
| 10.4 Setting the condition data .....                                      | 10- 17 |
| 10.4.1 Relation between various controls and the condition data .....      | 10- 17 |
| 10.4.2 Condition data setting examples .....                               | 10- 20 |
| 10.5 Multiple axes simultaneous start control .....                        | 10- 21 |
| 10.6 Start program for high-level positioning control .....                | 10- 24 |
| 10.6.1 Starting high-level positioning control .....                       | 10- 24 |
| 10.6.2 Example of a start program for high-level positioning control ..... | 10- 25 |

|                           |                        |
|---------------------------|------------------------|
| <b>11. MANUAL CONTROL</b> | <b>11- 1 to 11- 34</b> |
|---------------------------|------------------------|

|                                                                         |        |
|-------------------------------------------------------------------------|--------|
| 11.1 Outline of manual control .....                                    | 11- 2  |
| 11.1.1 Three manual control methods .....                               | 11- 2  |
| 11.2 JOG operation .....                                                | 11- 4  |
| 11.2.1 Outline of JOG operation .....                                   | 11- 4  |
| 11.2.2 JOG operation execution procedure .....                          | 11- 7  |
| 11.2.3 Setting the required parameters for JOG operation .....          | 11- 8  |
| 11.2.4 Creating start programs for JOG operation .....                  | 11- 10 |
| 11.2.5 JOG operation example .....                                      | 11- 13 |
| 11.3 Inching operation .....                                            | 11- 16 |
| 11.3.1 Outline of inching operation .....                               | 11- 16 |
| 11.3.2 Inching operation execution procedure .....                      | 11- 19 |
| 11.3.3 Setting the required parameters for inching operation .....      | 11- 20 |
| 11.3.4 Creating a program to enable/disable the inching operation ..... | 11- 21 |
| 11.3.5 Inching operation example .....                                  | 11- 24 |
| 11.4 Manual pulse generator operation .....                             | 11- 26 |
| 11.4.1 Outline of manual pulse generator operation .....                | 11- 26 |

|                                                                                        |        |
|----------------------------------------------------------------------------------------|--------|
| 11.4.2 Manual pulse generator operation execution procedure .....                      | 11- 30 |
| 11.4.3 Setting the required parameters for manual pulse generator operation .....      | 11- 31 |
| 11.4.4 Creating a program to enable/disable the manual pulse generator operation ..... | 11- 32 |

|                                                                    |                        |
|--------------------------------------------------------------------|------------------------|
| <b>12. CONTROL SUB FUNCTIONS</b>                                   | <b>12- 1 to 12-110</b> |
| 12.1 Outline of sub functions .....                                | 12- 2                  |
| 12.1.1 Outline of sub functions .....                              | 12- 2                  |
| 12.2 Sub functions specifically for machine OPR .....              | 12- 4                  |
| 12.2.1 OPR retry function.....                                     | 12- 4                  |
| 12.2.2 OP shift function .....                                     | 12- 8                  |
| 12.3 Functions for compensating the control .....                  | 12- 12                 |
| 12.3.1 Backlash compensation function .....                        | 12- 12                 |
| 12.3.2 Electronic gear function .....                              | 12- 14                 |
| 12.3.3 Near pass function .....                                    | 12- 21                 |
| 12.3.4 Output timing selection of near pass control .....          | 12- 23                 |
| 12.4 Functions to limit the control .....                          | 12- 27                 |
| 12.4.1 Speed limit function .....                                  | 12- 27                 |
| 12.4.2 Torque limit function .....                                 | 12- 29                 |
| 12.4.3 Software stroke limit function .....                        | 12- 33                 |
| 12.4.4 Hardware stroke limit function .....                        | 12- 39                 |
| 12.5 Functions to change the control details .....                 | 12- 41                 |
| 12.5.1 Speed change function .....                                 | 12- 41                 |
| 12.5.2 Override function .....                                     | 12- 48                 |
| 12.5.3 Acceleration/deceleration time change function .....        | 12- 51                 |
| 12.5.4 Torque change function .....                                | 12- 56                 |
| 12.5.5 Target position change function .....                       | 12- 58                 |
| 12.6 Absolute position restoration function .....                  | 12- 62                 |
| 12.7 Other functions .....                                         | 12- 73                 |
| 12.7.1 Step function.....                                          | 12- 73                 |
| 12.7.2 Skip function .....                                         | 12- 78                 |
| 12.7.3 M code output function.....                                 | 12- 81                 |
| 12.7.4 Teaching function .....                                     | 12- 86                 |
| 12.7.5 Command in-position function .....                          | 12- 93                 |
| 12.7.6 Acceleration/deceleration processing function.....          | 12- 96                 |
| 12.7.7 Pre-reading start function.....                             | 12- 99                 |
| 12.7.8 Deceleration start flag function .....                      | 12-104                 |
| 12.7.9 Stop command processing for deceleration stop function..... | 12-108                 |
| <b>13. COMMON FUNCTIONS</b>                                        | <b>13- 1 to 13- 8</b>  |
| 13.1 Outline of common functions .....                             | 13- 2                  |
| 13.2 Parameter initialization function.....                        | 13- 3                  |
| 13.3 Execution data backup function .....                          | 13- 5                  |
| 13.4 External I/O signal logic switching function .....            | 13- 7                  |
| 13.5 External I/O signal monitor function .....                    | 13- 8                  |

|                                                                                                            |                                    |

\*1: The manual is included in the CD-ROM of the software package in a PDF-format file.  
For users interested in buying the manual separately, a printed version is available. Please contact us with the manual number (model code) in the list above.

## USING THIS MANUAL

■ The symbols used in this manual are shown below.

|                   |                                                                               |
|-------------------|-------------------------------------------------------------------------------|
| <b>Pr.*</b> ..... | Symbol indicating positioning parameter and OPR parameter item.               |
| <b>Da.*</b> ..... | Symbol indicating positioning data, block start data and condition data item. |
| <b>Md.*</b> ..... | Symbol indicating monitor data item.                                          |
| <b>Cd.*</b> ..... | Symbol indicating control data item.                                          |

(A serial No. is inserted in the \* mark.)

■ Representation of numerical values used in this manual.

- Buffer memory addresses, error codes and warning codes are represented in decimal.
- X/Y devices are represented in hexadecimal.
- Setting data and monitor data are represented in decimal or hexadecimal.

Data ended by "H" are represented in hexadecimal.

(Example) 10.....Decimal

10H .....Hexadecimal

## COMPLIANCE WITH EMC AND LOW VOLTAGE DIRECTIVES

### (1) Method of ensuring compliance

To ensure that Mitsubishi Electric programmable controllers maintain EMC and Low Voltage Directives when incorporated into other machinery or equipment, certain measures may be necessary. Please refer to one of the following manuals.

- QCPU User's Manual (Hardware Design, Maintenance and Inspection)
- Safety Guidelines (this manual is included with the CPU module or base unit)

The CE mark on the side of the programmable controller indicates compliance with EMC and Low Voltage Directives.

### (2) Additional measures

To ensure that this product maintains EMC and Low Voltage Directives, please refer to Section 4.3.1.

## GENERIC TERMS AND ABBREVIATIONS

Unless specially noted, the following generic terms and abbreviations are used in this manual.

| Generic term/abbreviation      | Details of generic term/abbreviation                                                                                                                                                                         |
|--------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CPU module                     | Generic term for CPU module on which QD75 can be mounted.                                                                                                                                                    |
| QD75                           | Generic term for positioning module QD75P1N, QD75P2N, QD75P4N, QD75D1N, QD75D2N, QD75D4N, QD75P1, QD75P2, QD75P4, QD75D1, QD75D2, and QD75D4.<br>The module type is described to indicate a specific module. |
| QD75P□N                        | Generic term for positioning module QD75P1N, QD75P2N, QD75P4N.                                                                                                                                               |
| QD75D□N                        | Generic term for positioning module QD75D1N, QD75D2N, QD75D4N.                                                                                                                                               |
| QD75P□                         | Generic term for positioning module QD75P1, QD75P2, QD75P4.                                                                                                                                                  |
| QD75D□                         | Generic term for positioning module QD75D1, QD75D2, QD75D4.                                                                                                                                                  |
| Peripheral device              | Generic term for DOS/V personal computer that can run the following "GX Developer" and "GX Configurator-QP".                                                                                                 |
| GX Configurator-QP             | Abbreviation for GX Configurator-QP (SW2D5C-QD75P-E or later).                                                                                                                                               |
| GX Developer                   | Abbreviation for GX Developer (SW4D5C-GPPW-E or later).                                                                                                                                                      |
| GX Works2                      | Product name of the software package for the MELSEC programmable controllers.                                                                                                                                |
| Drive unit (servo amplifier)   | Abbreviation for pulse input compatible drive unit (servo amplifier).                                                                                                                                        |
| Manual pulse generator         | Abbreviation for manual pulse generator (prepared by user).                                                                                                                                                  |
| DOS/V personal computer        | IBM PC/AT® and compatible DOS/V compliant personal computer.                                                                                                                                                 |
| Personal computer              | Generic term for personal computer which supports Windows®.                                                                                                                                                  |
| Workpiece                      | Generic term for moving body such as workpiece and tool, and for various control targets.                                                                                                                    |
| Axis 1, axis 2, axis 3, axis 4 | Indicates each axis connected to QD75.                                                                                                                                                                       |
| 1-axis, 2-axis, 3-axis, 4-axis | Indicates the number of axes. (Example: 2-axis = Indicates two axes such as axis 1 and axis 2, axis 2 and axis 3, and axis 3 and axis 1.)                                                                    |

## LIST OF DISCONTINUED MODELS

The following table lists discontinued models described in this manual. For onerous repair term after discontinuation of production, refer to WARRANTY in this manual.

| Model  | Production discontinuation |
|--------|----------------------------|
| QD75P1 | September 2021             |
| QD75P2 | September 2021             |
| QD75P4 | September 2021             |
| QD75D1 | September 2021             |
| QD75D2 | September 2021             |
| QD75D4 | September 2021             |

## COMPONENT LIST

The table below shows the component included in respective positioning modules:

| Module name | Description                                                          | Quantity |
|-------------|----------------------------------------------------------------------|----------|
| QD75P1N     | QD75P1N Positioning Module(1-axis open collector output system)      | 1        |
| QD75P2N     | QD75P2N Positioning Module(2-axes open collector output system)      | 1        |
| QD75P4N     | QD75P4N Positioning Module(4-axes open collector output system)      | 1        |
| QD75D1N     | QD75D1N Positioning Module(1-axis differential driver output system) | 1        |
|             | Differential driver common terminal                                  | 1        |
| QD75D2N     | QD75D2N Positioning Module(2-axes differential driver output system) | 1        |
|             | Differential driver common terminal                                  | 1        |
| QD75D4N     | QD75D4N Positioning Module(4-axes differential driver output system) | 1        |
|             | Differential driver common terminal                                  | 1        |
| QD75P1      | QD75P1 Positioning Module(1-axis open collector output system)       | 1        |
| QD75P2      | QD75P2 Positioning Module(2-axes open collector output system)       | 1        |
| QD75P4      | QD75P4 Positioning Module(4-axes open collector output system)       | 1        |
| QD75D1      | QD75D1 Positioning Module(1-axis differential driver output system)  | 1        |
|             | Differential driver common terminal                                  | 1        |
| QD75D2      | QD75D2 Positioning Module(2-axes differential driver output system)  | 1        |
|             | Differential driver common terminal                                  | 1        |
| QD75D4      | QD75D4 Positioning Module(4-axes differential driver output system)  | 1        |
|             | Differential driver common terminal                                  | 1        |

## PART 1 PRODUCT SPECIFICATIONS AND HANDLING

PART 1 is configured for the following purposes (1) to (5).

- (1) To understand the outline of positioning control, and the QD75 specifications and functions
- (2) To carry out actual work such as installation and wiring
- (3) To set parameters and data required for positioning control
- (4) To create a sequence program required for positioning control
- (5) To understand the memory configuration and data transmission process

Read PART 2 for details on each control.

|           |                                                         |            |     |

# CHAPTER 1 PRODUCT OUTLINE

The purpose and outline of positioning control using QD75 are explained in this chapter. Reading this chapter will help you understand what can be done using the positioning system and which procedure to use for a specific purpose.

By understanding "What can be done", and "Which procedure to use" beforehand, the positioning system can be structured smoothly.

|       |                                                                        |    |    |
|-------|------------------------------------------------------------------------|----|----|
| 1.1   | Positioning control .....                                              | 1- | 2  |

## 1.1 Positioning control

### 1.1.1 Features of QD75

The features of the QD75 are shown below.

#### (1) Availability of one, two, and four axis modules

- (a) The pulse output types of the available modules are either the open collector output system or the differential driver output system. A module can be selected from the following depending on the drive unit type and the number of axes. (Refer to Section 2.2.)
  - Open collector output system:  
QD75P1N/QD75P2N/QD75P4N (QD75P1/QD75P2/QD75P4)
  - Differential driver output system:  
QD75D1N/QD75D2N/QD75D4N (QD75D1/QD75D2/QD75D4)
- (b) For connecting any of the QD75 modules to the base unit, a single slot and 32 dedicated I/O channels are required.  
Within the limit imposed by the maximum number of inputs and outputs supported by the CPU module, up to 64 modules can be used. (Refer to Section 3.1.)

#### (2) Wide variety of positioning control functions

- (a) A wide variety of positioning control functions essential to any positioning system are supported: positioning to an arbitrary position, fixed-feed control, equal-speed control, and so on. (Refer to Section 5.3 and 9.2.)
  - 1) Up to 600 positioning data items, including such information as positioning addresses, control systems, and operation patterns, can be prepared for each axis.  
Using the prepared positioning data, the positioning control is performed independently for each axis. (In addition, such controls as interpolation involving two to four axes and simultaneous startup of multiple axes are possible.)
  - 2) Independent control of each axis can be achieved in linear control mode (executable simultaneously over four axes).  
Such control can either be the independent positioning control using a single positioning data or the continuous positioning control enabled by the continuous processing of multiple positioning data.
  - 3) Coordinated control over multiple axes can take the form of either the linear interpolation through the speed or position control of two to four axes or the circular interpolation involving two axes.  
Such control can either be the independent positioning control using a single positioning data or the continuous positioning control enabled by the continuous processing of multiple positioning data.
- (b) For each positioning data, the user can specify any of the following control systems: position control, speed control, speed-position switching control, position-speed switching control, and so on. (Refer to Section 5.3 and 9.2.)

- (c) Continuous positioning control using multiple positioning data can be executed in accordance with the operation patterns the user assigned to the positioning data. (Refer to Section 5.3 and 9.1.2)  
Continuous positioning control can be executed over multiple blocks, where each block consists of multiple positioning data. (Refer to Section 10.3.2.)
  - (d) OPR control is given additional features (Refer to Section 8.2.)
    - 1) Six different machine OPR methods are provided: near point dog method (one method), stopper methods (three methods), and count methods (two methods).
    - 2) OPR retry function facilitates the machine OPR control from an arbitrary position.  
(The machine OP a premier reference position for positioning control. The machine is set to the machine OP through one of the machine OPR methods mentioned in 1) above.)
  - (e) Two acceleration/deceleration control methods are provided: trapezoidal acceleration/deceleration and S-curve acceleration/deceleration. (Refer to Section 12.7.6.)  
(Note that there is a restriction on executing the S-curve acceleration/deceleration for the system using stepping motors. Refer to Section 1.3.)
- (3) Quick startup (Refer to Section 3.1.)  
The processing time to start the positioning operation is shortened.  
QD75P□N/QD75D□N: 1.5ms (QD75P□/QD75D□: 6ms)  
When operation using simultaneous start function or interpolation operation is executed, the axes start without delay.
- |           |                                                                  |   |                                     |
|-----------|------------------------------------------------------------------|---|-------------------------------------|
| (Example) | Axis 1 and Axis 3 are started by the simultaneous start function | : | No delay in Axis 1 and Axis 3 start |
|           | Axis 2 and Axis 4 are started by the interpolation operation     | : | No delay in Axis 2 and Axis 4 start |
- (4) Faster pulse output and allowance of longer distance to drive unit (Refer to Section 3.1.)  
The modules with a differential driver (QD75D□N (QD75D□)) incorporate the improvements in pulse output speed and maximum distance to the drive unit.
- QD75D□N: 4Mpulse/s, 10m max. (QD75D□: 1Mpulse/s, 10m max.)
  - QD75P□N: 200kpulse/s, 2m max. (QD75P□: 200kpulse/s, 2m max.)
- (5) Easy maintenance  
Each QD75 positioning module incorporates the following improvements in maintainability:
- (a) Data such as the positioning data and parameters can be stored on a flash ROM inside the QD75, eliminating the need of a battery for retaining data. (Refer to Section 7.1.1.)
  - (b) Error messages are classified in more detail to facilitate the initial troubleshooting procedure. (Refer to Section 15.1.)
  - (c) The module retains 16 error messages and 16 warning messages recently output, offering more complete error and warning histories. (Refer to Section 5.6.1.)

(6) Support of intelligent function module dedicated instructions

Dedicated instructions such as the absolute position restoration instruction, positioning start instruction, and teaching instruction are provided.

The use of such dedicated instruction simplifies sequence programs. (Refer to CHAPTER 14.)

(7) Setups, monitoring, and testing through GX Configurator-QP

Using GX Configurator-QP, the user can control the QD75 parameters and positioning data without having to be conscious of the buffer memory addresses. Moreover, GX Configurator-QP has a test function which allows the user to check the wiring before creating a sequence program for positioning control, or test operation the QD75 using created parameters and positioning data for checking their integrity.

The control monitor function of GX Configurator-QP allows the user to debug programs efficiently.

## 1.1.2 Purpose and applications of positioning control

"Positioning" refers to moving a moving body, such as a workpiece or tool (hereinafter, generically called "workpiece") at a designated speed, and accurately stopping it at the target position. The main application examples are shown below.

### ■ Punch press (X, Y feed positioning)

- To punch insulation material or leather, etc., as the same shape at a high yield, positioning is carried out with the X axis and Y axis servos.
- After positioning the table with the X axis servo, the press head is positioned with the Y axis servo, and is then punched with the press.
- When the material type or shape changes, the press head die is changed, and the positioning pattern is changed.

### ■ Palletizer

- Using the servo for one axis, the palletizer is positioned at a high accuracy.
- The amount to lower the palletizer according to the material thickness is saved.

### ■ Compact machining center (ATC magazine positioning)

- The ATC tool magazine for a compact machining center is positioned.
- The relation of the magazine's current value and target value is calculated, and positioning is carried out with forward run or reverse run to achieve the shortest access time.

### ■ Lifter (Storage of Braun tubes onto aging rack)

- During the aging process of braun tubes, storage onto the rack is carried out by positioning with the AC servo.
- The up/down positioning of the lifter is carried out with the 1-axis servo, and the horizontal position of the aging rack is positioned with the 2-axis servo.

### ■ Index table (High-accuracy indexing of angle)

- The index table is positioned at a high accuracy using the 1-axis servo.

### ■ Inner surface grinder

- The grinding of the workpiece's inner surface is controlled with the servo and inverter.
- The rotation of the workpiece is controlled with the 1-axis inverter, and the rotation of the grinding stone is controlled with the 2-axis inverter. The workpiece is fed and ground with the 3-axis servo.

## 1.1.3 Mechanism of positioning control

Positioning control using the QD75 is carried out with "pulse signals". (The QD75 is a module that generates pulses). In the positioning system using the QD75, various software and devices are used for the following roles. The QD75 realizes complicated positioning control when it reads in various signals, parameters and data and is controlled with the CPU module.

The principle of "position control" and "speed control" operation is shown below.

### ■ Position control

The total No. of pulses required to move the designated distance is obtained in the following manner.

$$\left[ \begin{array}{l} \text{Total No. of pulses} \\ \text{required to move} \\ \text{designated distance} \end{array} \right] = \left[ \begin{array}{l} \text{Designated distance} \\ \text{Movement amount of machine (load)} \\ \text{side when motor rotates once} \end{array} \right] \times \left[ \begin{array}{l} \text{No. of pulses} \\ \text{required for motor to} \\ \text{rotate once} \end{array} \right]$$

\*The No. of pulses required for the motor to rotate once is the "encoder resolution" described in the motor catalog specification list.

When this total No. of pulses is issued from the QD75 to the servo amplifier, control to move the designated distance can be executed.

The machine side movement amount when one pulse is issued to the servo amplifier is called the "movement amount per pulse". This value is the min. value for the workpiece to move, and is also the electrical positioning precision.

### ■ Speed control

The "Total No. of pulses" mentioned above is invariably required for controlling the distance. For positioning or speed control, the speed must be controlled as well.

The speed is determined by the frequency of pulses sent from the QD75 to the drive unit.

Fig. 1.1 Relationship between position control and speed control

### POINT

The QD75 controls the position with the "total No. of pulses", and the speed with the "pulse frequency".

## 1.1.4 Outline design of positioning system

The outline of the positioning system operation and design, using the QD75, is shown below.

## (1) Positioning system using QD75

Fig. 1.2 Outline of the operation of positioning system using QD75

## (a) Positioning operation by the QD75

## 1) The QD75 output is a pulse train.

The pulse train output by the QD75 is counted by and stored in the deviation counter in the drive unit.

The D/A converter outputs an analog DC current proportionate to the count maintained by the deviation counter (called "pulse droop"). The analog DC current serves as the servomotor speed control signal.

## 2) The motor rotation is controlled by the speed control signal from the drive unit.

As the motor rotates, the pulse encoder (PLG) attached to the motor generates feedback pulses, the frequency of which is proportionate to the rotation speed.

The feedback pulses are fed back to the drive unit and decrements the pulse droop, the pulse count maintained by the deviation counter.

The motor keeps on rotating as the pulse droop is maintained at a certain level.

## 3) When the QD75 terminates the output of a pulse train, the motor decelerates as the pulse droop decreases and stops when the count drops to zero.

Thus, the motor rotation speed is proportionate to the pulse frequency, while the overall motor rotation angle is proportionate to the total number of pulses output by the QD75.

Therefore, when a movement amount per pulse is given, the overall movement amount can be determined by the number of pulses in the pulse train.

The pulse frequency, on the other hand, determines the motor rotation speed (feed speed).

## (b) Pulse train output from the QD75

- 1) As shown in Fig. 1.3, the pulse frequency increases as the motor accelerates. The pulses are sparse when the motor starts and more frequent when the motor speed comes close to the target speed.
- 2) The pulse frequency stabilizes when the motor speed equals the target speed.
- 3) The QD75 decreases the pulse frequency (sparser pulses) to decelerate the motor before it finally stops the output. There will be a little difference in timing between the decrease in the pulse frequency and the actual deceleration and stopping of the motor. This difference, called "the stop settling time", is required for gaining a stopping accuracy.

Fig. 1.3 QD75 output pulses

## (2) Movement amount and speed in a system using worm gears

Fig. 1.4 System using worm gears

- (a) In the system shown in Fig. 1.4, the movement amount per pulse, command pulse frequency, and the deviation counter droop pulse amount are determined as follows:
- 1) Movement amount per pulse  
 The movement amount per pulse is determined by the worm gear lead, deceleration ratio, and the pulse encoder resolution.  
 The movement amount, therefore, is given as follows: (Number of pulses output) × (Movement amount per pulse).  

$$A = \frac{L}{R \times n} \text{ [mm/pulse]}$$
  - 2) Command pulse frequency  
 The command pulse frequency is determined by the speed of the moving part and movement amount per pulse:  

$$V_s = \frac{V}{A} \text{ [pulse/s]}$$
  - 3) Deviation counter droop pulse amount.  
 The deviation counter droop pulse amount is determined by the command pulse frequency and position loop gain.  

$$\varepsilon = \frac{V_s}{K} \text{ [pulse]}$$
- (b) The QD75 allows the user to select from the following four units as the unit used by positioning commands to any of the axes (1 to 4, if the module supports four axes): mm, inch, degree, and pulse.  
 The unit selected for one axis may differ from the unit selected for another axis.  
 When such data as the acceleration/deceleration time, positioning speed, and positioning address are correctly set in consideration of the chosen unit, the QD75 can calculate the number of pulses required for a movement amount to the target positioning address and execute the positioning by outputting a pulse train that includes the calculated number of pulses.

## 1.1.5 Communicating signals between QD75 and each module

The outline of the signal communication between the QD75 and CPU module, peripheral device and drive unit, etc., is shown below.  
(A peripheral device communicates with the QD75 via the CPU module to which it is connected)

### ■ QD75 ↔ CPU module

The QD75 and CPU module communicate the following data via the base unit.

| Direction<br>Communication | QD75 → CPU module                                                                                                                                                     | CPU module → QD75                                                                                                                             |
|----------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| Control signal *           | Signal indicating QD75 state, such as QD75 READY signal, BUSY signal.                                                                                                 | Signal related to commands such as PLC READY signal, various start signals, stop signals                                                      |
| Data (read/write)          | <ul style="list-style-type: none"> <li>• Parameter</li> <li>• Positioning data</li> <li>• Block start data</li> <li>• Control data</li> <li>• Monitor data</li> </ul> | <ul style="list-style-type: none"> <li>• Parameter</li> <li>• Positioning data</li> <li>• Block start data</li> <li>• Control data</li> </ul> |

\* Refer to Section 3.3 "Specifications of input/output signals with CPU module " for details.

### ■ QD75 ↔ Peripheral device

The QD75 and peripheral device communicate the following data via the CPU module:

| Direction<br>Communication | QD75 → Peripheral device                                                                                              | Peripheral device → QD75                                                                                                                                                                                                                                                       |
|----------------------------|-----------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Data (read/write)          | <ul style="list-style-type: none"> <li>• Parameter</li> <li>• Positioning data</li> <li>• Block start data</li> </ul> | <ul style="list-style-type: none"> <li>• Parameter</li> <li>• Positioning data</li> <li>• Block start data</li> </ul>                                                                                                                                                          |
| Test operation             | —                                                                                                                     | <ul style="list-style-type: none"> <li>• OPR control start command</li> <li>• Positioning control start command</li> <li>• JOG/Inching operation start command</li> <li>• Teaching start command</li> <li>• Manual pulse generator operation enable/disable command</li> </ul> |
| Operation monitor          | • Monitor data                                                                                                        | —                                                                                                                                                                                                                                                                              |

### ■ QD75 ↔ Drive unit

The QD75 and drive unit communicate the following data via the external device connection connector.

| Direction<br>Communication | QD75 → Drive unit                                                  | Drive unit → QD75                                                   |
|----------------------------|--------------------------------------------------------------------|---------------------------------------------------------------------|
| Control signal             | Signals related to commands such as deviation counter clear signal | Signals indicating drive unit state such as drive unit READY signal |
| Pulse train                | • Pulse train output                                               | —                                                                   |

### ■ QD75 ↔ Manual pulse generator

The QD75 and manual pulse generator communicate the following data via the external device connection connector.

(The manual pulse generator should be connected to an external device connection connector for axis 1 or for axes 1 and 2.)

| Direction<br>Communication | QD75 → Manual pulse generator | Manual pulse generator → QD75                                  |
|----------------------------|-------------------------------|----------------------------------------------------------------|
| Pulse signal               | —                             | Manual pulse generator A-phase, manual pulse generator B-phase |

## ■ QD75 ↔ External signal

The QD75 and external signal communicate the following data via the external device connection connector.

| Direction<br>Communication | QD75 → External signal | External signal → QD75                                                                                                                                                                                                                   |
|----------------------------|------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Control signal             | —                      | <ul style="list-style-type: none"><li>• Signals from detector such as near-point dog signal, upper/lower limit signal, zero signal</li><li>• Control signals from external device such as stop signal, external command signal</li></ul> |

## 1.2 Flow of system operation

## 1.2.1 Flow of all processes

The positioning control processes, using the QD75, are shown below.

The following work is carried out with the processes shown on the previous page.

|     | Details                                                                                                                                                                                                                                                                   | Reference                                                                                                                                                                   |
|-----|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1)  | Understand the product functions and usage methods, the configuration devices and specifications required for positioning control, and design the system.                                                                                                                 | <ul style="list-style-type: none"> <li>• CHAPTER 1</li> <li>• CHAPTER 2</li> <li>• CHAPTER 3</li> <li>• CHAPTER 8 to CHAPTER 13</li> </ul>                                  |
| 2)  | Install the QD75 onto the base unit, wire the QD75 and external connection devices (drive unit, etc.).                                                                                                                                                                    | <ul style="list-style-type: none"> <li>• CHAPTER 4</li> </ul>                                                                                                               |
| 3)  | Using GX Configurator-QP, set the parameters, positioning data, block start data and condition data required for the positioning control to be executed. *1                                                                                                               | <ul style="list-style-type: none"> <li>• CHAPTER 5</li> <li>• CHAPTER 8 to CHAPTER 13</li> <li>• GX Configurator-QP Operating Manual</li> </ul>                             |
| 4)  | Using GX Developer, create the sequence program required for positioning operation. (When not using GX Configurator-QP, also create the sequence program for setting data.)                                                                                               | <ul style="list-style-type: none"> <li>• CHAPTER 6</li> <li>• GX Developer Operating Manual</li> </ul>                                                                      |
| 5)  | Write the parameters and positioning data, etc., created with GX Configurator-QP into the QD75.                                                                                                                                                                           | <ul style="list-style-type: none"> <li>• CHAPTER 7</li> <li>• GX Configurator-QP Operating Manual</li> </ul>                                                                |
| 6)  | Using GX Developer, write the created sequence program into the CPU module. (When not using GX Configurator-QP, also write in the sequence program for setting data.)                                                                                                     | <ul style="list-style-type: none"> <li>• CHAPTER 7</li> <li>• GX Developer Operating Manual</li> </ul>                                                                      |
| 7)  | Carry out test operation and adjustments in the test mode to check the connection with the QD75 and external connection device, and to confirm that the designated positioning operation is executed correctly. (Debug the set "parameters" and "positioning data", etc.) | <ul style="list-style-type: none"> <li>• GX Configurator-QP Operating Manual</li> <li>• CHAPTER 13</li> <li>• GX Developer Operating Manual</li> </ul>                      |
| 8)  | Carry out test operation and adjustment to confirm that the designated positioning operation is executed correctly. (Debug the created sequence program. When not using GX Configurator-QP, also debug the set data.)                                                     | <ul style="list-style-type: none"> <li>• GX Developer Operating Manual</li> </ul>                                                                                           |
| 9)  | Actually operate the positioning operation. At this time, monitor the operation state as required. If an error or warning occurs, remedy.                                                                                                                                 | <ul style="list-style-type: none"> <li>• CHAPTER 5</li> <li>• CHAPTER 15</li> <li>• GX Configurator-QP Operating Manual</li> <li>• GX Developer Operating Manual</li> </ul> |
| 10) | Service the QD75 as required.                                                                                                                                                                                                                                             | <ul style="list-style-type: none"> <li>• CHAPTER 4</li> </ul>                                                                                                               |
| 11) | Dispose of the QD75.                                                                                                                                                                                                                                                      | <ul style="list-style-type: none"> <li>• CHAPTER 4</li> </ul>                                                                                                               |

\*1: When setting the QD75P□N/QD75D□N using GX Configurator-QP, there are restrictions on the setting ranges of some items. (Refer to Appendix 1.2.)

# MEMO

[illegible]

## 1.2.2 Outline of starting

The outline for starting each control is shown with the following flowchart.

\*It is assumed that each module is installed, and the required system configuration, etc., has been prepared.

## Setting method

: Indicates the sequence program that must be created.

## 1.2.3 Outline of stopping

Each control is stopped in the following cases.

- (1) When each control is completed normally.
- (2) When the drive unit READY signal is turned OFF.
- (3) When a CPU module error occurs
- (4) When the PLC READY signal is turned OFF.
- (5) When an error occurs in the QD75.
- (6) When control is intentionally stopped (Stop signal from CPU module turned ON, stop signal from an external device, etc.)

The outline for the stopping process in these cases is shown below. (Excluding (1) for normal stopping.)

| Stop cause                             |                                                              | Stop axis | M code ON signal after stop | Axis operation status after stopping<br>(Md.26) | Stop process                                                                               |                  |                           |                                |                       |                                  |
|----------------------------------------|--------------------------------------------------------------|-----------|-----------------------------|-------------------------------------------------|--------------------------------------------------------------------------------------------|------------------|---------------------------|--------------------------------|-----------------------|----------------------------------|
|                                        |                                                              |           |                             |                                                 | OPR control                                                                                |                  | Major positioning control | High-level positioning control | Manual control        |                                  |
|                                        |                                                              |           |                             |                                                 | Machine OPR control                                                                        | Fast OPR control |                           |                                | JOG/Inching operation | Manual pulse generator operation |

| Emergency stop<br>(Stop group 2)       | CPU module error occurrence                                  | All axes  | No change                   | Error                                           | Deceleration stop/sudden stop<br>(Select with " Pr.38 Stop group 2 sudden stop selection") |                  |                           |                                | Deceleration stop     |                                  |
|                                        | PLC READY signal OFF                                         |           | Turns OFF                   |                                                 |                                                                                            |                  |                           |                                |                       |                                  |
|                                        | Error in test mode                                           |           | No change                   |                                                 |                                                                                            |                  |                           |                                |                       |                                  |
| Relatively safe stop<br>(Stop group 3) | Axis error detection (Error other than stop group 1 or 2) *1 | Each axis | No change                   | Error                                           | Deceleration stop/sudden stop<br>(Select with " Pr.39 Stop group 3 sudden stop selection") |                  |                           |                                | Deceleration stop     |                                  |
| Intentional stop<br>(Stop group 3)     | "Stop signal" ON from external source                        | Each axis | No change                   | Stopped (Standby)                               |                                                                                            |                  |                           |                                |                       |                                  |
|                                        | "Stop signal" input from peripheral device*2                 |           |                             |                                                 |                                                                                            |                  |                           |                                |                       |                                  |

\*1: When multiple positioning data is executed by the continuous positioning control and there is invalid setting value in a positioning data, an error occurs and deceleration is performed at the previous positioning data. In this case, sudden stop is not performed even when it is set for the stop group 3. If any of the following error occurs, the operation is immediately stopped after executing up to previous positioning data of the positioning data where an error occurred.

- No command speed (error code: 503)
- Outside linear movement amount range (error code: 504)
- Large arc error deviation (error code: 506)
- Software stroke limit + (error code: 507)
- Software stroke limit - (error code: 508)
- Sub point setting error (error code: 525)
- End point setting error (error code: 526)
- Center point setting error (error code: 527)
- Outside radius range (error code: 544)
- Illegal setting of ABS direction in unit of degree (error code: 546)

\*2: This means the stop using a stop button on the test dialog box when using the positioning test function of GX Works2 or test function of GX Configurator-QP.

## 1.2.4 Outline of restarting

When a stop cause has occurred during operation with position control causing the axis to stop, positioning to the end point of the positioning data can be restarted from the stopped position by using the " **Cd.6** Restart command".

If issued during a continuous positioning or continuous path control operation, the restart command will cause the positioning to be re-executed using the current position (pointed by the positioning data No. associated with the moment when the movement was interrupted) as the start point.

■ When " **Cd.6** Restart command" is ON

- (1) If the " **Md.26** Axis operation status" is "Stopped", positioning to the end point of the positioning data will be restarted from the stopped position regardless of the absolute system or incremental system.
- (2) When " **Md.26** Axis operation status" is not "Stopped", the warning "Restart not possible" (warning code: 104) will be applied, and the restart command will be ignored.

[Example for incremental system]

- (a) The restart operation when the axis 1 movement amount is 300, and the axis 2 movement amount is 600 is shown below.

■ Reference

If the positioning start signal [Y10 to Y13]/external command signal\* is turned ON while the " **Md.26** Axis operation status" is "Standby" or "Stopped", positioning will be restarted from the start of the positioning start data regardless of the absolute system or incremental system. (\*: When the external command signal is set to "External positioning start")  
(Same as normal positioning.)

[Example for incremental system]

- (a) The positioning start operation when the axis 1 movement amount is 300 and the axis 2 movement amount is 600 is shown below.

### 1.3 Restrictions on using a stepping motor

Note the following restrictions on using a stepping motor:

- (1) For an axis where a stepping motor is connected, executing the S-curve acceleration/deceleration may cause step-out.  
Before using the S-curve acceleration/deceleration, confirm that step-out does not occur.
- (2) The circular interpolation control and 3-axis helical interpolation control cannot be used for an axis where a stepping motor is connected.  
Although setting the bias speed at start is required by the characteristics of the stepping motor, the setting of the bias speed at start is disabled for circular interpolation control.  
Ensure to use a servomotor for all axes where interpolation controls are carried out when the circular interpolation control or 3-axis helical interpolation control is carried out.
- (3) The backlash compensation function cannot be used for an axis where a stepping motor is connected. If the function is used, the motor may lose steps.

### 1.4 Function additions/modifications according to function version B

| POINT                                                                                                                                                                        |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| When it is desired to check the following items, refer to the corresponding explanation sections.<br>How to check the function version and SERIAL No. (Refer to Section 2.4) |

The following function additions/modifications according to the function version B of the QD75:

| Function                                                  | Outline                                                                                                                                                                                              | Reference      |

| Multiple CPU compatible function                          | Refer to QCPU User's Manual (Multiple CPU System).                                                                                                                                                   |                |
| Speed-position switching control (ABS mode)               | Function which starts the axis under speed control, switches to position control at the external command signal input, then positions the axis to a stop at the designated address.                  | Section 9.2.19 |
| Pre-reading start function                                | Function which shortens virtual start time.                                                                                                                                                          | Section 12.7.7 |
| External I/O signal monitor function                      | Function which monitors the external I/O signal monitor information in the module's detailed information which can be displayed on the system monitor of GX Developer *1.                            | Section 13.5   |
| Deceleration start flag function *2                       | Function that turns ON the flag when the constant speed status or acceleration status switches to the deceleration status during position control whose operation pattern is "Positioning complete". | Section 12.7.8 |
| Stop command processing for deceleration stop function *3 | Function that selects a deceleration curve when a stop cause occurs during deceleration stop processing to speed 0.                                                                                  | Section 12.7.9 |

\*1: For the QD75P□/QD75D□, this function is available in GX Developer (SW6D5C-GPPW-E or later). For details, refer to GX Developer Operating Manual.

For the QD75P□N/QD75D□N, external I/O signals cannot be monitored on GX Developer. Use the system monitor of GX Works2. For details on the system monitor of GX Works2, refer to GX Works2 Version 1 Operating Manual (Common).

\*2: For the QD75P□/QD75D□, this function is available for modules whose serial No. (first five digits) is "03042" or later.

\*3: For the QD75P□/QD75D□, this function is available for modules whose serial No. (first five digits) is "05072" or later.

# CHAPTER 2 SYSTEM CONFIGURATION

In this chapter, the general image of the system configuration of the positioning control using QD75, the configuration devices, applicable CPU and the precautions of configuring the system are explained.  
Prepare the required configuration devices to match the positioning control system.

## 2.1 General image of system

The general image of the system, including the QD75, CPU module and peripheral devices is shown below.

(The Nos. in the illustration refer to the "No." in Section 2.2 "Component list".)

**REMARK**

\*1 Refer to Section 2.3 "Applicable system" for the CPU modules that can be used.

\*2 Refer to the CPU module User's Manual for the base units that can be used.

## 2.2 Configuration list

The positioning system using the QD75 is configured of the following devices.

| No. | Part name                                                                | Type                                                                                                                       | Remarks                                                                                                                                                                                                                                                                  |

| Permitted axial loads     | Radial load: Max. 19.6N                                                                                                     |
|                           | Thrust load: Max. 9.8N                                                                                                      |
| Operation temperature     | -10 to 60°C (14 to 140°F)                                                                                                   |
| Weight                    | 0.4 (0.88) [kg(lb)]                                                                                                         |
| Number of max. revolution | Instantaneous Max. 600r/min. normal 200r/min                                                                                |
| Pulse signal status       | 2 signals: A phase, B phase, 90° phase difference                                                                           |
| Start friction torque     | 0.06N·m (at 20°C (68°F))                                                                                                    |

<sup>\*1</sup>: Use the stabilized power supply of 4.5 to 6.1 VDC for the power supply of the manual pulse generator.

## 2.3 Applicable system

The QD75 can be used in the following system.

### (1) Applicable modules and base units, and No. of modules

#### (a) When mounted with a CPU module

For the CPU modules, the number of modules, and base units applicable to the QD75, refer to the user's manual for the CPU modules used.

Check the following when the QD75 is mounted with the CPU module.

- Depending on the combination with other modules or the number of mounted modules, power supply capacity may be insufficient. Pay attention to the power supply capacity before mounting modules, and if the power supply capacity is insufficient, change the combination of the modules.
- Mount a module within the number of I/O points for the CPU module. If the number of slots is within the available range, the module can be mounted on any slot.

|               |
|---------------|
| <b>REMARK</b> |
|---------------|

To use a C Controller module with the QD75, refer to C Controller Module User's Manual.

#### (b) Mounting to a MELSECNET/H remote I/O station

For the MELSECNET/H remote I/O station, the number of modules, and base units applicable to the QD75, refer to the Q Corresponding MELSECNET/H Network System Reference Manual (Remote I/O network).

### (2) Compatibility with multiple CPU system

When using the QD75 in a multiple CPU system, refer to the QCPU User's Manual (Multiple CPU System).

## (3) Supported software packages

The following table lists the compatibility between the systems using the QD75 and the software packages. GX Developer or GX Works2 is required for use of the QD75.

|                                                                     |                     | Software version       |                                  |                                                         |

\*1: To use the QD75P□N/QD75D□N with GX Configurator-QP, select the QD75P□/QD75D□ as the model name. The QD75P□N/QD75D□N can be used in the same manner as the QD75P□/QD75D□; the setting ranges are the same. Therefore, a speed exceeding 1000000pulse/s cannot be set in some items. (Refer to Appendix 1.2)

**POINT**

When using GX Works2, refer to the following:

- GX Works2 Version 1 Operating Manual (Common)
- GX Works2 Version 1 Operating Manual (Intelligent Function Module)

## 2.4 How to check the function version and SERIAL No.

## (1) Confirming the serial number on the rating plate

The rating plate is situated on the side face of the QD75.

## (2) Checking on the front of the module

The serial No. on the rating plate is also indicated on the front of the module (lower part).

## (3) Confirming the serial number with software

Check the function version and SERIAL No. in "Product information" displayed on System monitor "Module's Detailed Information" of GX Developer or on "OS information" of GX Configurator-QP <sup>\*1</sup>

## (a) Checking on the System monitor (Product Information List) screen

To open the screen, select [Diagnostics] → [System monitor] and click the Product Information List button in GX Developer.

<GX Developer display screen>

[Production No. display]

Since the QD75 does not support the production number display, "-" is displayed.

**POINT**

The serial No. on the rating plate may be different from the serial No. displayed on the product information screen of GX Developer.

- The serial No. on the rating plate indicates the management information of the product.
- The serial No. displayed on the product information screen of GX Developer indicates the function information of the product. The function information of the product is updated when a new function is added.

## (b) Checking with GX Configurator-QP

<GX Configurator-QP display screen>

\*1: For details, refer to GX Configurator-QP Operating Manual.

[illegible]

# CHAPTER 3 SPECIFICATIONS AND FUNCTIONS

The various specifications of the QD75 are explained in this chapter.

The "Performance specifications", "List of functions", "Specifications of input/output signals with CPU module", and the "Specifications of input/output interfaces with external devices", etc., are described as information required when designing the positioning system.

Confirm each specification before designing the positioning system.

\*1: QD75P□N represents the open collector output system, and QD75D□N represents the differential driver output system.

\*2: In speed-position switching control (ABS mode), the control unit available is "degree" only. (For details, refer to Section 9.2.19 "Speed-position switching control (ABS mode)".)

\*1: QD75P□N represents the open collector output system, and QD75D□N represents the differential driver output system.

\*3: Using the "Pre-reading start function", the virtual start time can be shortened. (For details, refer to Section 12.7.7 "Pre-reading start function".

\*1: QD75P □ represents the open collector output system, and QD75D □ represents the differential driver output system.

\*2: In speed-position switching control (ABS mode), the control unit available is "degree" only. (For details, refer to Section 9.2.19 "Speed-position switching control (ABS mode)".)

## 3.2 List of functions

### 3.2.1 QD75 control functions

The QD75 has several functions. In this manual, the QD75 functions are categorized and explained as follows.

#### ■ Main functions

##### (1) OPR control

"OPR control" is a function that established the start point for carrying out positioning control, and carries out positioning toward that start point. This is used to return a workpiece, located at a position other than the OP when the power is turned ON or after positioning stop, to the OP. The "OPR control" is preregistered in the QD75 as the "Positioning start data No. 9001 (Machine OPR)", and "Positioning start data No. 9002 (Fast OPR)". (Refer to CHAPTER 8 "OPR CONTROL".)

##### (2) Major positioning control

This control is carried out using the "Positioning data" stored in the QD75. Positioning control, such as position control and speed control, is executed by setting the required items in this "positioning data" and starting that positioning data. An "operation pattern" can be set in this "positioning data", and with this whether to carry out control with continuous positioning data (ex.: positioning data No. 1, No. 2, No. 3, ...) can be set. (Refer to CHAPTER 9 "MAJOR POSITIONING CONTROL".)

##### (3) High-level positioning control

This control executes the "positioning data" stored in the QD75 using the "block start data". The following types of applied positioning control can be carried out.

- Random blocks, handling several continuing positioning data items as "blocks", can be executed in the designated order.
- "Condition judgment" can be added to position control and speed control.
- The operation of the designated positioning data No. that is set for multiple axes can be started simultaneously. (Pulses are output simultaneously to multiple servos.)
- The designated positioning data can be executed repeatedly, etc., (Refer to CHAPTER 10 "HIGH-LEVEL POSITIONING CONTROL".)

##### (4) Manual control

By inputting a signal into the QD75 from an external source, the QD75 will output a random pulse train and carry out control. Use this manual control to move the workpiece to a random position (JOG operation), and to finely adjust the positioning (inching operation, manual pulse generator operation), etc. (Refer to CHAPTER 11 "MANUAL CONTROL".)

#### ■ Sub functions

When executing the main functions, control compensation, limits and functions can be added. (Refer to CHAPTER 12 "CONTROL SUB FUNCTIONS".)

#### ■ Common functions

Common control using the QD75 for "parameter initialization" or "backup of execution data" can be carried out. (Refer to CHAPTER 13 "COMMON FUNCTIONS".)

## 3.2.2 QD75 main functions

The outline of the main functions for positioning control with the QD75 is described below. (Refer to PART 2 for details on each function.)

| Main functions            |                                  | Details                                                                                                                                                              | Reference section                    |
|---------------------------|----------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------|
| OPR control               | Machine OPR control              | Mechanically establishes the positioning start point using a near-point dog or stopper. (Positioning start No. 9001)                                                 | 8.2                                  |
|                           | Fast OPR control                 | Positions a target to the OP address ( <u>Md.21</u> Machine feed value) stored in the QD75 using machine OPR. (Positioning start No. 9002)                           | 8.3                                  |

|--------------------------------|------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|
| High-level positioning control | Block start (Normal start)               | With one start, executes the positioning data in a random block with the set order.                                                                                                                                                                                                                                                | 10.3.2            |
|                                | Condition start                          | Carries out condition judgment set in the "condition data" for the designated positioning data, and then executes the "block start data".<br>When the condition is established, the "block start data" is executed. When not established, that "block start data" is ignored, and the next point's "block start data" is executed. | 10.3.3            |
|                                | Wait start                               | Carries out condition judgment set in the "condition data" for the designated positioning data, and then executes the "block start data".<br>When the condition is established, the "block start data" is executed. When not established, stops the control until the condition is established. (Waits.)                           | 10.3.4            |
|                                | Simultaneous start                       | Simultaneously executes the positioning data having the No. for the axis designated with the "condition data". (Outputs pulses at the same timing.)                                                                                                                                                                                | 10.3.5            |
|                                | Repeated start (FOR loop)                | Repeats the program from the block start data set with the "FOR loop" to the block start data set in "NEXT" for the designated No. of times.                                                                                                                                                                                       | 10.3.6            |
|                                | Repeated start (FOR condition)           | Repeats the program from the block start data set with the "FOR condition" to the block start data set in "NEXT" until the conditions set in the "condition data" are established.                                                                                                                                                 | 10.3.7            |
|                                | Multiple axes simultaneous start control | Starts the operation of multiple axes simultaneously according to the pulse output level.<br>(Positioning start No. 9004, same as the "simultaneous start" above)                                                                                                                                                                  | 10.5              |
| Manual control                 | JOG operation                            | Outputs a pulse to drive unit while the JOG start signal is ON.                                                                                                                                                                                                                                                                    | 11.2              |
|                                | Inching operation                        | Outputs pulses corresponding to minute movement amount by manual operation to drive unit.<br>(Performs fine adjustment with the JOG start signal.)                                                                                                                                                                                 | 11.3              |
|                                | Manual pulse generator operation         | Outputs pulses commanded with the manual pulse generator to drive unit. (Carry out fine adjustment, etc., at the pulse level.)                                                                                                                                                                                                     | 11.4              |

With the "major positioning control" ("high-level positioning control"), whether or not to continuously execute the positioning data can be set with the "operation pattern".

Outlines of the "operation patterns" are given below.

| Da.1 Operation pattern                                    | Details                                                                                                                                                                                                                                               | Reference section |
|-----------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|
| Independent positioning control<br>(Positioning complete) | When "independent positioning control" is set for the operation pattern of the started positioning data, only the designated positioning data will be executed, and then the positioning will end.                                                    | 9.1.2             |
| Continuous positioning control                            | When "continuous positioning control" is set for the operation pattern of the started positioning data, after the designated positioning data is executed, the program will stop once, and then the next following positioning data will be executed. |                   |
| Continuous path control                                   | When "continuous path control" is set for the operation pattern of the started positioning data, the designated positioning data will be executed, and then without decelerating, the next following positioning data will be executed.               |                   |

## 3.2.3 QD75 sub functions and common functions

## ■ Sub functions

The functions that assist positioning control using the QD75 are described below.  
(Refer to PART 2 for details on each function.)

| Sub function                            |                                                | Details                                                                                                                                                                                                                                                                                   | Reference section |
|-----------------------------------------|------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|
| Functions characteristic to machine OPR | OPR retry function                             | This function retries the machine OPR with the upper/lower limit switches during machine OPR. This allows machine OPR to be carried out even if the axis is not returned to before the near-point dog with JOG operation, etc.                                                            | 12.2.1            |
|                                         | OP shift function                              | After returning to the machine OP, this function compensates the position by the designated distance from the machine OP position and sets that position as the OP address.                                                                                                               | 12.2.2            |
| Functions that compensate control       | Backlash compensation function                 | This function compensates the mechanical backlash. Feed pulses equivalent to the set backlash amount are output each time the movement direction changes.                                                                                                                                 | 12.3.1            |
|                                         | Electronic gear function                       | By setting the movement amount per pulse, this function can freely change the machine movement amount per commanded pulse.<br>A flexible positioning system that matches the machine system can be structured with this function.                                                         | 12.3.2            |
|                                         | Near pass function *1                          | This function suppresses the machine vibration when the positioning data is switched during continuous path control in the interpolation control.                                                                                                                                         | 12.3.3            |
|                                         | Output timing selection of near pass control   | This function allows the user to select the timing to output the difference ( $\Delta \ell$ ) between the actual and the set positioning end addresses in continuous path control, in which the difference ( $\Delta \ell$ ) is output during the execution of the next positioning data. | 12.3.4            |
| Functions that limit control            | Speed limit function                           | If the command speed exceeds " [Pr.8] Speed limit value" during control, this function limits the commanded speed to within the " [Pr.8] Speed limit value" setting range.                                                                                                                | 12.4.1            |
|                                         | Torque limit function *2                       | If the torque generated by the servomotor exceeds " [Pr.17] Torque limit setting value" during control, this function limits the generated torque to within the " [Pr.17] Torque limit setting value" setting range.                                                                      | 12.4.2            |
|                                         | Software stroke limit function                 | If a command outside of the upper/lower limit stroke limit setting range, set in the parameters, is issued, this function will not execute positioning for that command.                                                                                                                  | 12.4.3            |
|                                         | Hardware stroke limit function                 | This function carries out deceleration stop with the limit switch connected to the QD75 external device connector.                                                                                                                                                                        | 12.4.4            |
| Functions that change control details   | Speed change function                          | This function changes the speed during positioning.<br>Set the new speed in the speed change buffer memory ([Cd.14] New speed value), and change the speed with the Speed change request ([Cd.15]).                                                                                       | 12.5.1            |
|                                         | Override function                              | This function changes the speed within a percentage of 1 to 300% during positioning. This is executed using " [Cd.13] Positioning operation speed override".                                                                                                                              | 12.5.2            |
|                                         | Acceleration/deceleration time change function | This function changes the acceleration/deceleration time during speed change. (Functions added to the speed change function and override function)                                                                                                                                        | 12.5.3            |
|                                         | Torque change function                         | This function changes the "torque limit value" during control.                                                                                                                                                                                                                            | 12.5.4            |
|                                         | Target position change function                | This function changes the target position during positioning. Position and speed can be changed simultaneously.                                                                                                                                                                           | 12.5.5            |

\* 1: The near pass function is featured as standard and is valid only for position control. It cannot be set to be invalid with parameters.

\* 2: Using "Torque limit function" requires a "D/A conversion module" and a "drive unit capable of torque limit command with analog voltage".

| Sub function                              | Details                                                                                                                                                                                           | Reference section |
|-------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|
| Absolute position restoration function *3 | This function restores the absolute position of designated axis. By this function, the OPR after power ON from OFF is not required once the OPR is executed when the system operation is started. | 12.6              |

\* 3: To execute the "absolute position restoration function", the following are required: "16-point input module"; "16-point output module"; and "drive unit capable of configuring an absolute position detection system, which is a Mitsubishi Electric General-Purpose AC Servo having an absolute position detection function (absolute position data transference protocol) equivalent to that of MR-J3-□A".

| Sub function    |                                                        | Details                                                                                                                                                                                                                                                                                                                                     | Reference section |
|-----------------|--------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|
| Other functions | Step function                                          | This function temporarily stops the operation to confirm the positioning operation during debugging, etc. The operation can be stopped at each "automatic deceleration" or "positioning data".                                                                                                                                              | 12.7.1            |
|                 | Skip function                                          | This function stops (decelerates to a stop) the positioning being executed when the skip signal is input, and carries out the next positioning.                                                                                                                                                                                             | 12.7.2            |
|                 | M code output function                                 | This function issues a command for a sub work (clamp or drill stop, tool change, etc.) corresponding to the M code No. (0 to 65535) that can be set for each positioning data.                                                                                                                                                              | 12.7.3            |
|                 | Teaching function                                      | This function stores the address positioned with manual control into the positioning address having the designated positioning data No. ( <u>Cd.39</u> ).                                                                                                                                                                                   | 12.7.4            |
|                 | Command in-position function                           | At each automatic deceleration, this function calculates the remaining distance for the QD75 to reach the positioning stop position. When the value is less than the set value, the "command in-position flag" is set to "1". When using another auxiliary work before ending the control, use this function as a trigger for the sub work. | 12.7.5            |
|                 | Acceleration/deceleration process function             | This function adjusts the control acceleration/deceleration. (acceleration/deceleration time and curve).                                                                                                                                                                                                                                    | 12.7.6            |
|                 | Continuous operation interrupt function                | This function interrupts continuous operation. When this request is accepted, the operation stops when the execution of the current positioning data is completed.                                                                                                                                                                          | 6.5.4             |
|                 | Pre-reading start function                             | This function shortens the virtual start time.                                                                                                                                                                                                                                                                                              | 12.7.7            |
|                 | Deceleration start flag function                       | Function that turns ON the flag when the constant speed status or acceleration status switches to the deceleration status during position control, whose operation pattern is "Positioning complete", to make the stop timing known.                                                                                                        | 12.7.8            |
|                 | Stop command processing for deceleration stop function | Function that selects a deceleration curve when a stop cause occurs during deceleration stop processing to speed 0.                                                                                                                                                                                                                         | 12.7.9            |

### ■ Common functions

The outline of the functions executed as necessary are described below.  
(Refer to PART 2 for details on each function.)

| Common functions                             | Details                                                                                                                                                                                                                                                                      | Reference section |
|----------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|
| Parameter initialization function            | This function returns the "parameters" stored in the QD75 buffer memory and flash ROM to the default values.<br>The following two methods can be used.<br>1) Method using sequence program<br>2) Method using GX Configurator-QP                                             | 13.2              |
| Execution data backup function               | This functions stores the "setting data", currently being executed, into the flash ROM.<br>1) Method using sequence program<br>2) Method using GX Configurator-QP                                                                                                            | 13.3              |
| External I/O signal logic switching function | This function switches I/O signal logic according to externally connected devices.<br>This function enables the use of the system that does not use b (N.C.)-contact signals, such as Drive unit READY or Upper/lower limit signal, by setting parameters to positive logic. | 13.4              |
| External I/O signal monitor function         | This function monitors the external I/O signal monitor information in the module's detailed information which can be displayed on the system monitor of GX Developer*4.                                                                                                      | 13.5              |

\*4: For the QD75P□/QD75D□, this function is available in GX Developer (SW6D5C-GPPW-E or later).

For the QD75P□N/QD75D□N, external I/O signals cannot be monitored on GX Developer. Use the system monitor of GX Works2.

## 3.2.4 Combination of QD75 main functions and sub functions

With positioning control using the QD75, the main functions and sub functions can be combined and used as necessary. A list of the main function and sub function combinations is given below.

| Main functions            |                                  |                                                      | Sub functions                                       | Functions characteristic to machine OPR |                   |
|---------------------------|----------------------------------|------------------------------------------------------|-----------------------------------------------------|-----------------------------------------|-------------------|
|                           |                                  |                                                      |                                                     | OPR retry function                      | OP shift function |
|                           |                                  |                                                      | Combination with operation pattern. ※1              |                                         |                   |
| OPR control               | Machine OPR control              |                                                      | ×                                                   | ○                                       | ○                 |
|                           | Fast OPR control                 |                                                      | ×                                                   | ×                                       | ×                 |
| Major positioning control | Position control                 | 1-axis linear control                                | ○                                                   | ×                                       | ×                 |
|                           |                                  | 2-, 3-, or 4-axis linear interpolation control       | ○                                                   | ×                                       | ×                 |
|                           |                                  | 1-axis fixed-feed control                            | △ (Continuous path control cannot be set)           | ×                                       | ×                 |
|                           |                                  | 2-, 3-, or 4-axis fixed-feed control (interpolation) | △ (Continuous path control cannot be set)           | ×                                       | ×                 |
|                           |                                  | 2-axis circular interpolation control                | ○                                                   | ×                                       | ×                 |
|                           |                                  | 3-axis helical interpolation control                 | ○                                                   | ×                                       | ×                 |
|                           |                                  | Speed control (1- to 4-axis)                         | △ (Only independent positioning control can be set) | ×                                       | ×                 |

◎: Always combine, ○: Combination possible, △: Combination limited, ×: Combination not possible

※1 The operation pattern is one of the "positioning data" setting items.

※2 The near pass function is featured as standard and is valid only for setting continuous path control for position control.

※3 Invalid during creep speed.

※4 Invalid during continuous path control.

※5 Combination with the inching operation is not available. (Inching operation does not perform acceleration/deceleration processing.)

※6 Valid for the reference axis only.

※7 Valid for only the case where a deceleration start is made during position control.

※8 Valid when using the positioning data but invalid when using the positioning start No. 9003.

## 3.3 Specifications of input/output signals with CPU module

## 3.3.1 List of input/output signals with CPU module

The QD75 uses 32 input points and 32 output points for exchanging data with the CPU module.

The input/output signals when the QD75 is mounted in slot No. 0 of the main base unit are shown below.

Device X refers to the signals input from the QD75 to the CPU module, and device Y refers to the signals output from the CPU module to the QD75.

| Signal direction: QD75 → CPU module |                      |                      | Signal direction: CPU module → QD75 |                |                            |

**Important**

[Y1 to Y3], [Y18 to Y1F], [X2, X3], and [X18 to X1F] are used by the system, and cannot be used by the user.

If these devices are used, the operation of the QD75 will not be guaranteed.

## 3.3.2 Details of input signals (QD75 → CPU module)

The ON/OFF timing and conditions of the input signals are shown below.

| Device No.               | Signal name                          |                         | Details                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

For the interpolation control, the positioning completed signal of interpolation axis turns ON during the time set to the reference axis.<br/>(It does not turn ON when "Pr.40 Positioning complete signal output time" is "0".)</li> <li>If positioning (including OPR), JOG/Inching operation, or manual pulse generator operation is started while this signal is ON, the signal will turn OFF.</li> <li>This signal will not turn ON when speed control or positioning is canceled midway.</li> </ul>                                                                                                                   |

**Important**

- \*1: The BUSY signal turns ON even when position control of movement amount 0 is executed. However, since the ON time is short, the ON status may not be detected in the sequence program.
- \*2: "Positioning complete" of the QD75 refers to the point when the pulse output from QD75 is completed.  
Thus, even if the QD75's positioning complete signal turns ON, the system may continue operation.

## 3.3.3 Detail of output signals (CPU module → QD75)

The ON/OFF timing and conditions of the output signals are shown below.

| Device No.                                   | Signal name                                                                  |                                                                                                                                                                                                      | Details                                                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

\*1: For details on "Pr.5 Pulse output mode", refer to "Section 5.2.1, Basic parameters 1".

## POINT

Set the parameters, " [Pr.5] Pulse output mode" and " [Pr.23] Output signal logic selection", in accordance with the specifications of a connected servo amplifier. If not, the motor may rotate in the opposite direction or may not rotate at all.

Connection examples with a MELSERVO-J3 series servo amplifier are shown below.

## Open collector connection (QD75P□N)

## Differential driver connection (QD75D□N)

## ■ QD75P□/QD75D□

\* 1: For details on " [Pr.5] Pulse output mode", refer to "Section 5.2.1, Basic parameters 1".

## POINT

Set the parameters, " [Pr.5] Pulse output mode" and " [Pr.23] Output signal logic selection", in accordance with the specifications of a connected servo amplifier. If not, the motor may rotate in the opposite direction or may not rotate at all.

Connection examples with a MELSERVO-J3 series servo amplifier are shown below.

## Open collector connection (QD75P□)

## Differential driver connection (QD75D□)

## 3.4.2 Signal layout for external device connection connector

The specifications of the connector section, which is the input/output interface for the QD75 and external device, are shown below.

The signal layout for the QD75 external device connection connector is shown.

| Pin layout |     |     | Axis 4(AX4) |             | Axis 3(AX3) |             | Axis 2(AX2)   |             | Axis 1(AX1) |             |

\* 1: Pin No. "1□ □ □" indicates the pin No. for the right connector. Pin No. "2 □ □ □" indicates the pin No. for the left connector.

\* 2: When a 1-axis module is used, pin Nos. 1B1 to 1B18 are "vacant".

\* 3: The upper line indicates the signal name for the QD75P□N/QD75P□, and the lower line indicates the signal name for the QD75D□N/QD75D□.

## 3.4.3 List of input/output signal details

The details of each QD75 external device connection connector are shown below:

| Signal name                                                                                | Pin No.      |      |      |      | Signal details<br>(Negative logic is selected by external I/O signal logic selection)                                                                                                                                                                                                                                                                                                         |

## 3.4.4 Input/output interface internal circuit

The outline diagrams of the internal circuits for the QD75P1N/QD75D1N/QD75P1/QD75D1 external device connection interface are shown below.

## (1) Input (Common to QD75P1N, QD75D1N, QD75P1, and QD75D1)

| External wiring | Pin No.  | Internal circuit | Signal name                    |           | Need for wiring<br>*1 |

|                 | 1A9      |                  |                                | PG05      |                       |
|                 | 1A10     |                  | Zero signal common             | PG0 COM   |                       |

\*1: The symbols in Need for wiring column indicate the following meanings:

- : Wiring is necessary for positioning.
- △ : Wiring is necessary depending on the situation.

\*2: Either polarity can be connected to the common (COM).

## (a) Input signal ON/OFF status

The input signal ON/OFF status is defined by the external wiring and logic setting.

This is explained below with the example of near-point dog signal (DOG).

(The other input signals also perform the same operations as the near-point dog signal (DOG).)

| Logic setting<br>*3, *4           | External wiring *4                                                                                           | ON/OFF status of near-point dog<br>signal (DOG) as seen from QD75 |
|-----------------------------------|--------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------|
| Negative logic<br>(Initial value) | (Voltage not applied)<br>   | OFF                                                               |
|                                   | (Voltage applied)<br>       | ON                                                                |
| Positive logic                    | (Voltage not applied)<br> | ON                                                                |
|                                   | (Voltage applied)<br>     | OFF                                                               |

\*3: Set the logic setting using " [Pr.22] Input signal logic selection". For details of the settings, refer to "Section 5.2.3 Detailed parameters 1" and "Section 13.4 External I/O signal logic switching function".

\*4: When using the upper limit signal (FLS) or lower limit signal (RLS), always wire it as a "b" (normally closed) contact in the negative logic setting. The signal will turn OFF to stop positioning.

## (b) About logic setting and internal circuit

In the QD75, the case where the internal circuit (photocoupler) is OFF in the negative logic setting is defined as "input signal OFF".

Reversely, the case where the internal circuit (photocoupler) is OFF in the positive logic setting is defined as "input signal ON".

## &lt;Photocoupler ON/OFF status&gt;

When voltage is not applied : Photocoupler OFF

When voltage is applied : Photocoupler ON

## (2) Output (For QD75P1N and QD75P1)

\*1: The symbols in Need for wiring column indicate the following meanings:

- : Wiring is necessary for positioning.
- △: Wiring is necessary depending on the situation.

\*2: A terminal block at the bottom of the module. (Refer to Section 4.1.2)

# CHAPTER 4 INSTALLATION, WIRING AND MAINTENANCE OF THE PRODUCT

The installation, wiring and maintenance of the QD75 are explained in this chapter.

Important information such as precautions to prevent malfunctioning of the QD75, accidents and injuries as well as the proper work methods are described. Read this chapter thoroughly before starting installation, wiring or maintenance, and always following the precautions.

## 4.1 Outline of installation, wiring and maintenance

## 4.1.1 Installation, wiring and maintenance procedures

The outline and procedures for QD75 installation, wiring and maintenance are shown below.

## 4.1.2 Names of each part

- (1) The part names of the QD75 are described with the QD75P□N/QD75D□N as an example. The QD75P□N/QD75D□N and QD75P□/QD75D□ are different in the indication of their model names and serial numbers

| No. | Name                                                                                              | Details                                                                                                                                                                                                                                                                    |
|-----|---------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1)  | RUN indicator LED, ERR indicator LED                                                              | Refer to the next page.                                                                                                                                                                                                                                                    |
| 2)  | Axis display LED (AX1 to AX4)                                                                     |                                                                                                                                                                                                                                                                            |
| 3)  | External device connector                                                                         | Connector for connection with the drive unit, mechanical system input or manual pulse generator. (40-pin connector)<br>AX1: Axis 1, AX2: Axis 2, AX3: Axis 3, AX4: Axis 4<br>For details, refer to Section 3.4.2 "Signal layout for external device connection connector". |
| 4)  | Differential driver common terminal (Differential driver output system (the QD75D□N/QD75D□) only) | Terminal connected to the differential receiver common of the drive unit. For details, refer to Section 4.3.2 "Wiring of the differential driver common terminal".                                                                                                         |
| 5)  | Serial number plate                                                                               | Indicates the serial number of the QD75                                                                                                                                                                                                                                    |

- (2) The LED display indicates the following operation statuses of the QD75 and axes.

| Display                                                                                                                                                                                                      | Attention point              | Description                             | Display                                                                                                                                                                                                                                                  | Attention point                           | Description                                |

| RUN <input checked="" type="checkbox"/> <input type="checkbox"/> AX1<br><input type="checkbox"/> AX2<br><input type="checkbox"/> AX3<br>ERR <input type="checkbox"/> <input type="checkbox"/> AX4            | AX1 to AX4 are OFF.          | The axes are stopped or on standby.     |                                                                                                                                                                                                                                                          |                                           |                                            |

The symbols in the Display column indicate the following statuses:

☐: Turns OFF. ☒: Illuminates. ☒: Flashes.

- (3) The interface of each QD75 is as shown below.

QD75P1N

QD75P2N

QD75P4N

QD75D1N

QD75D2N

QD75D4N

### 4.1.3 Handling precautions

Handle the QD75 and cable while observing the following precautions.

#### [1] Handling precautions

#### CAUTION

- Use the programmable controller in an environment that meets the general specifications contained in QCPU User's Manual(Hardware Design, Maintenance and Inspection) to use. Using this programmable controller in an environment outside the range of the general specifications may cause electric shock, fire, malfunction, and damage to or deterioration of the product.
- Do not directly touch the conductive section and electronic parts of the module. Failure to observe this could lead to module malfunctioning or trouble.
- Make sure that foreign matter, such as cutting chips or wire scraps, do not enter the module. Failure to observe this could lead to fires, trouble or malfunctioning.
- Never disassemble or modify the module. Failure to observe this could lead to trouble, malfunctioning, injuries or fires.

## [2] Other precautions

### (1) Main body

- The main body case is made of plastic. Take care not to drop or apply strong impacts onto the case.
- Do not remove the QD75 PCB from the case. Failure to observe this could lead to faults.

### (2) Cable

- Do not press on the cable with a sharp object.
- Do not twist the cable with force.
- Do not forcibly pull on the cable.
- Do not step on the cable.
- Do not place objects on the cable.
- Do not damage the cable sheath.

### (3) Installation environment

Do not install the module in the following type of environment.

- Where the ambient temperature exceeds the 0 to 55°C range.
- Where the ambient humidity exceeds the 5 to 95%RH range.
- Where there is sudden temperature changes, or where dew condenses.
- Where there is corrosive gas or flammable gas.
- Where there are high levels of dust, conductive powder, such as iron chips, oil mist, salt or organic solvents.
- Where the module will be subject to direct sunlight.
- Where there are strong electric fields or magnetic fields.
- Where vibration or impact could be directly applied onto the main body.

## 4.2 Installation

### 4.2.1 Installation precautions

The precautions for installing the QD75 are given below. Refer to this section as well as "4.1.3 Handling precautions" when carrying out the work.

#### Installation precautions

#### WARNING

- Completely turn off the externally supplied power used in the system before cleaning or tightening the screws.  
Failure to turn all phases OFF could lead to electric shocks.

#### CAUTION

- Never disassemble or modify the module.  
Failure to observe this could lead to trouble, malfunctioning, injuries or fires.
- Completely turn off the externally supplied power used in the system before installing or removing the module.  
Failure to turn all phases OFF could lead to module trouble or malfunctioning.
- Do not install/remove the module to/from the base unit, or the terminal block to/from the module more than 50 times after the first use of the product (IEC 61131-2 compliant). Failure to do so may cause the module to malfunction due to poor contact of connector.
- Use the programmable controller in an environment that meets the general specifications contained in QCPU User's Manual(Hardware Design, Maintenance and Inspection) to use.  
Using this programmable controller in an environment outside the range of the general specifications may cause electric shock, fire, malfunction, and damage to or deterioration of the product.
- Hold down the module mounting lever at the bottom of the module and securely insert the module fixing projection into the fixing holes of the base module. Improper mounting of the module may lead to malfunctioning, faults, or dropping.  
When using the module in the environment subject to much vibration, secure the module with a screw.  
Tighten the screw within the range of the specified tightening torque.  
Insufficient tightening may lead to dropping, short-circuit, or malfunctioning.  
Excessive tightening may damage the screw or module, leading to dropping, short-circuit, or malfunctioning.

### 4.3 Wiring

The precautions for wiring the QD75 are given below. Refer to this section as well as "4.1.3 Handling precautions" when carrying out the work.

#### 4.3.1 Wiring precautions

- (1) Always confirm the terminal layout before connecting the wires to the QD75.  
(For the terminal layout, refer to Section 3.4.2 "Signal layout for external device connection connector".)
- (2) Correctly solder the external wiring connector. An incomplete soldering could lead to malfunctioning.
- (3) Make sure that foreign matter such as cutting chips and wire scraps does not enter the QD75. Failure to observe this could lead to fires, faults or malfunctioning.
- (4) A protective label is attached on the top of the QD75 to avoid foreign matter such as wire scraps from entering inside during wiring process. Do not remove the label until the wiring is completed. Before starting the system, however, be sure to remove the label to ensure heat radiation.
- (5) Tighten the connector screws within the specified torque range.  
Undertightening can cause short circuit, fire, or malfunction.  
Overtightening can damage the screw and/or module, resulting in drop, short circuit, fire, or malfunction.
- (6) When disconnecting the cable from the QD75 or the drive unit, do not pull the cable by the cable part. Hold the connector part of the cable. Pulling the cable connected to the QD75 or the drive unit may result in malfunction or damage to the module, drive unit, or cable.
- (7) Do not bundle or adjacently lay the connection cable connected to the QD75 external I/O signals or drive unit with the main circuit line, power line, or the load line other than that for the programmable controller. Separate these by 100mm as a guide. Failure to observe this could lead to malfunctioning caused by noise, surge, or induction.
- (8) The shielded cable for connecting QD75 can be secured in place.  
If the shielded cable is not secured, unevenness or movement of the shielded cable or careless pulling on it could result in damage to the QD75 or drive unit or shielded cable or defective cable connections could cause mis-operation of the unit.
- (9) If the cable connected to the QD75 and the power line must be adjacently laid (less than 100mm), use a shielded cable. Ground the shield of the cable securely to the control panel on the QD75 side. (A wiring example is given on the next page.)

## [Applicable connectors]

The table below shows applicable connectors for external devices. When wiring, use applicable wires and an appropriate tightening torque.

| Mitsubishi Electric 40-pin connector |                   | Wire                                          |          |          |                    |
|--------------------------------------|-------------------|-----------------------------------------------|----------|----------|--------------------|
| Model                                | Tightening torque | Diameter                                      | Type     | Material | Temperature rating |
| A6CON1                               | 0.20 to 0.29N • m | 0.3mm <sup>2</sup> (22AWG)                    | Stranded | Copper   | 75°C or more       |
| A6CON2                               |                   | 0.088 to 0.24mm <sup>2</sup><br>(28 to 24AWG) |          |          |                    |
| A6CON4                               |                   | 0.3mm <sup>2</sup> (22AWG)                    |          |          |                    |

## [Wiring example of shielded cable]

The following shows a wiring example for noise reduction in the case where the connector A6CON1 is used.

**[Processing example of shielded cables]**

Connect a cable with the FG wire and bind all shielded cables as shown below.

Remove the covering from all shielded cables and bind the appeared shield with a conductive tape.

## Assembling of connector (A6CON1)

(10) For compliance with the EMC and Low Voltage Directives, satisfy the following requirements.

- The cable connecting the drive unit and the QD75 must be the length below.

QD75P□N/QD75P□: 2m or shorter

QD75D□N/QD75D□: 10m or shorter

- The cables connected to the external device for the QD75 must be 30m or shorter. (except the one for pulse output)

- Use shielded twisted pair cables and an AD75CK type cable clamp (manufactured by Mitsubishi Electric) to ground the cables to the control box.

Even when compliance with the EMC Directive is not required, attaching an AD75CK type cable clamp to the cable connected to the QD75 may reduce the influence of external noise.

For details on AD75CK, refer to the following.

AD75CK-type Cable Clamping Instruction Manual

[Wiring examples using duct (incorrect example and corrected example)]

- (11) The influence of noise may be reduced by installing ferrite cores to the cable connected to the QD75 as a noise reduction technique.  
For the noise reduction techniques related to connection with the servo amplifier, also refer to the instruction manual of the servo amplifier.

### 4.3.2 Wiring of the differential driver common terminal

When the differential driver output system (QD75D□N/QD75D□) is used, a potential difference between commons may occur between the differential driver common terminal and the differential receiver common terminal of the drive unit. To remove the potential difference between commons, connect the differential driver common terminal of the QD75D□N/QD75D□ and the differential receiver common terminal of the drive unit.

When the common terminal of the drive unit is photocoupler-connected, the wiring to the differential driver common terminal of the QD75D□N/QD75D□ is not needed since a potential difference between commons does not exist.

(For the drive unit specifications, refer to the manual of the used drive unit.)

#### ■ Applicable connectors

To wire the differential driver common terminal, use the wire applied to the following table.

| Wire diameter                               | Type                      | Material | Temperature rating |
|---------------------------------------------|---------------------------|----------|--------------------|
| 0.24 to 2.5mm <sup>2</sup><br>(24 to 12AWG) | Stranded wire/single wire | Copper   | 75°C or more       |

#### ■ Wiring example

The following shows an example of wiring to the differential driver common terminal of the QD75D□N/QD75D□.

Up to two cables can be connected to one differential driver common terminal. (For details, refer to Section 3.1 "Performance specifications".)

## 4.4 Checking installation and wiring

### 4.4.1 Items to check when installation and wiring are completed

Check the following points when completed with the QD75 installation and wiring.

- Is the module correctly wired? ... "Connection confirmation"

With "connection confirmation", the following three points are confirmed using GX Configurator-QP's connection confirmation function. (GX Configurator-QP is required for this "connection confirmation".)

- Are the QD75 and servo amplifier correctly connected?
- Are the servo amplifier and servomotor correctly connected?
- Are the QD75 and external device (input/output signal) correctly connected?

With this "connection confirmation", "whether the direction that the QD75 recognizes as forward run matches the address increment direction in the actual positioning work", and "whether the QD75 recognizes the external input/output signals such as the near-point dog signal and stop signal" can be checked.

Refer to GX Configurator-QP Operating Manual for details on "Connection confirmation".

Note that GX Developer (SW6D5C-GPPW-E or later)\*1 may also be used to "confirm the connection between the QD75 and external device (I/O signals)". For details, refer to Section 13.5 "External I/O signal monitor function" and GX Developer Operating Manual.

\*1: For the QD75P□N/QD75D□N, external I/O signals cannot be monitored on GX Developer. Use the system monitor of GX Works2. For details on the system monitor of GX Works2, refer to GX Works2 Version 1 Operating Manual (Common).

| Important                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| If the QD75 is faulty, or when the required signals such as the near-point dog signal and stop signal are not recognized, unexpected accidents such as "not decelerating at the near-point dog during machine OPR and colliding with the stopper", or "not being able to stop with the stop signal" may occur. The "connection confirmation" must be carried out not only when structuring the positioning system, but also when the system has been changed with module replacement or rewiring, etc. |

## 4.5 Maintenance

### 4.5.1 Maintenance precautions

The precautions for servicing the QD75 are given below. Refer to this section as well as "4.1.3 Handling precautions" when carrying out the work.

#### WARNING

- Always turn all phases of the power supply OFF externally before cleaning or tightening the screws.  
Failure to turn all phases OFF could lead to electric shocks.

#### CAUTION

- Never disassemble or modify the module.  
Failure to observe this could lead to trouble, malfunctioning, injuries or fires.
- Completely turn off the externally supplied power used in the system before installing or removing the module.  
Failure to turn all phases OFF could lead to module trouble or malfunctioning.

### 4.5.2 Disposal precautions

#### CAUTION

- When disposing of the product, handle it as industrial waste.

# CHAPTER 5 DATA USED FOR POSITIONING CONTROL

The parameters and data used to carry out positioning control with the QD75 are explained in this chapter.

With the positioning system using the QD75, the various parameters and data explained in this chapter are used for control. The parameters and data include parameters set according to the device configuration, such as the system configuration, and parameters and data set according to each control. Read this chapter thoroughly and make settings according to each control or application.

\* Read PART 2 for details on each control.

|       |                                                |       |
|-------|------------------------------------------------|-------|
| 5.1   | Types of data .....                            | 5- 2  |

| 5.6   | List of monitor data .....                     | 5-86  |
| 5.6.1 | System monitor data .....                      | 5-86  |
| 5.6.2 | Axis monitor data .....                        | 5-96  |
| 5.7   | List of control data .....                     | 5-110 |
| 5.7.1 | System control data .....                      | 5-110 |
| 5.7.2 | Axis control data .....                        | 5-114 |

## 5.1 Types of data

## 5.1.1 Parameters and data required for control

The parameters and data required to carry out control with the QD75 include the "setting data", "monitor data" and "control data" shown below.

**Setting data**

(Data set beforehand according to the machine and application, and stored in the flash ROM.)

- ◇ The data is set with the sequence program or peripheral device.  
In this chapter, the method using the peripheral device will be explained.  
(Refer to "Point" on the next page.)
- ◇ The basic parameters 1, detailed parameters 1, and OPR parameters become valid when the PLC READY signal [Y0] turns from OFF to ON. Note, however, that the only valid value of the " Pr.5 Pulse output mode" is the value at the moment when the PLC READY signal [Y0] turns from OFF to ON for the first time after the power is switched ON or the CPU module is reset. Once the PLC READY signal [Y0] has been turned ON, the value will not be reset even if another value is set to the parameter and the PLC READY signal [Y0] is turned from OFF to ON.
- ◇ Even when the PLC READY signal [Y0] is ON, the values or contents of the following can be changed: basic parameters 2, detailed parameters 2, positioning data, and block start data.

- ◇ The only valid data assigned to basic parameters 2, detailed parameters 2, positioning data, or block start data are the data read at the moment when a positioning or JOG operation is started. Once the operation has started, any modification to the data is ignored.

Exceptionally, however, modifications to the following are valid even when they are made during a positioning operation: acceleration time 0 to 3, deceleration time 0 to 3, and external start command.

- Acceleration time 0 to 3 and deceleration time 0 to 3:

Positioning data are pre-read and pre-analyzed. Modifications to the data four or more steps after the current step are valid.

- External command function selection: The value at the time of detection is valid.

\*1: Md.50 to Md.52 are only for the QD75P□N/QD75D□N.

- ◇ The data is monitored with the sequence program or peripheral device. In this chapter, the method using the peripheral device will be explained.

- ◇ Control using the control data is carried out with the sequence program.  
" Cd.41 Deceleration start flag valid" is valid for only the value at the time when the PLC READY signal [Y0] turns from OFF to ON.

## 5.1.2 Setting items for positioning parameters

The table below lists items set to the positioning parameters. Setting of positioning parameters is similarly done for individual axes for all controls achieved by the QD75. For details of controls, refer to PART 2. For details of setting items, refer to Section 5.2 "List of parameters".

| Positioning parameter |        |                                                  | Control | OPR control | Major positioning control                                        |                                                            |                                                                               |                        |                           |                                          |                                                    | Manual control |                                  | Related sub function |                                    |

◎ : Always set

○ : Set as required

— : Setting not required (This is an irrelevant item, so the setting value will be ignored. If the value is the default value or within the setting range, there is no problem.)

### ■ Checking the positioning parameters

Pr.1 to Pr.42 are checked with the following timing.

- (1) When the "PLC READY signal [Y0]" output from the CPU module to the QD75 changes from OFF to ON
- (2) When the test operation button is turned ON in the test mode using GX Configurator-QP
- (3) When an error check is carried out with GX Configurator-QP

### REMARK

- "High-level positioning control" is carried out in combination with the "major positioning control".  
Refer to the "major positioning control" parameter settings for details on the parameters required for "high-level positioning control".

## 5.1.3 Setting items for OPR parameters

When carrying out "OPR control", the "OPR parameters" must be set. The setting items for the "OPR parameters" are shown below.

The "OPR parameters" are set commonly for each axis.

Refer to CHAPTER 8 "OPR CONTROL" for details on the "OPR control", and to Section 5.2 "List of parameters" for details on each setting item.

| OPR control             |       |                                                         | Machine OPR control   |                   |                   |                   |                 |                 | Fast OPR control |

○ : Always set

○ : Preset parameters are used for machine OPR control.

— : Setting not required (This is an irrelevant item, so the setting value will be ignored. If the value is the default value or within the setting range, there is no problem.)

R : Set when using the "12.2.1 OPR retry function".

S : Set when using the "12.2.2 OP shift function".

C : Set the deviation counter clear signal output time.

#### ■ Checking the OPR parameters.

Pr.43 to Pr.57 are checked with the following timing.

- (1) When the "PLC READY signal [Y0]" output from the CPU module to the QD75 changes from OFF to ON
- (2) When the test operation button is turned ON in the test mode using GX Configurator-QP
- (3) When an error check is carried out with GX Configurator-QP

## 5.1.4 Setting items for positioning data

Positioning data must be set for carrying out any "major positioning control". The table below lists the items to be set for producing the positioning data.

One to 600 positioning data items can be set for each axis.

For details of the major positioning controls, refer to CHAPTER 9 "MAJOR POSITIONING CONTROL". For details of the individual setting items, refer to Section 5.3 "List of positioning data".

| Major positioning control<br><br>Positioning data |                                        |                                 | Position control                                                                                                                                       |                                                              |                                                        |                                                     | 1 to 4 axis speed control                                                                                                                                                            | Speed-position switching control                         | Position-speed switching control                         | Other control   |                        |                                       |                    |      |

◎ : Always set, ○ : Set as required, × : Setting not possible

—: Setting not required (This is an irrelevant item, so the set value will be ignored. If the value is the default value or within the setting range, there is no problem.)

\* 1: Two control systems are available: the absolute (ABS) system and incremental (INC) system.

\* 2: Set the M code for the reference axis and the number of pitch for the linear interpolation axis.

### ■ Checking the positioning data

The items Da.1 to Da.10 are checked at the following timings:

- (1) Startup of a positioning operation
- (2) Error check performed by GX Configurator-QP

## 5.1.5 Setting items for block start data

The "block start data" must be set when carrying out "high-level positioning control".

The setting items for the "block start data" are shown below.

Up to 50 points of "block start data" can be set for each axis.

Refer to CHAPTER 10 "HIGH-LEVEL POSITIONING CONTROL" for details on the "high-level positioning control", and to Section 5.4 "List of block start data" for details on each setting item.

| High-level positioning control<br>Block start data |                           | Block start<br>(Normal start) | Condition<br>start | Wait start | Simultaneous<br>start | Repeated<br>start<br>(FOR loop) | Repeated<br>start<br>(FOR<br>condition) |

○ : Set as required

— : Setting not required (This is an irrelevant item, so the setting value will be ignored. If the value is the default value or within the setting range, there is no problem.)

### ■ Checking the block start data

Da.11 to Da.14 are checked with the following timing.

- (1) When the "Block start data" starts
- (2) When an error check is carried out with GX Configurator-QP

## 5.1.6 Setting items for condition data

When carrying out "high-level positioning control" or using the JUMP instruction in the "major positioning control", the "condition data" must be set as required. The setting items for the "condition data" are shown below.

Up to 10 "condition data" items can be set for each axis.

For the "high-level positioning control", JUMP instruction, and setting items, refer to the following.

- "High-level positioning control" Refer to CHAPTER 10 "HIGH-LEVEL POSITIONING CONTROL"
- JUMP instruction.....Refer to Section 9.2.23 "JUMP instruction".
- Setting items .....Refer to Section 5.5 "List of condition data".

| Control<br>Condition data |                    | Major positioning control   |                  | High-level positioning control |                 |            |                     |                           |                                |
|---------------------------|--------------------|-----------------------------|------------------|--------------------------------|-----------------|------------|---------------------|---------------------------|--------------------------------|
|                           |                    | Other than JUMP instruction | JUMP instruction | Block start (Normal start )    | Condition start | Wait start | Simul-taneous start | Repeated start (FOR loop) | Repeated start (FOR condition) |
| Da.15                     | Condition target   | —                           | ○                | —                              | ○               | ○          | ○                   | —                         | ○                              |

○ : Set as required

△ : Setting limited

— : Setting not required (This is an irrelevant item, so the setting value will be ignored. If the value is the default value or within the setting range, there is no problem.)

### ■ Checking the condition data

Da.15 to Da.19 are checked with the following timing.

- (1) When the "Block start data" starts
- (2) When "JUMP instruction" starts
- (3) When an error check is carried out with GX Configurator-QP

## 5.1.7 Types and roles of monitor data

The monitor data area in the buffer memory stores data relating to the operating state of the positioning system, which are monitored as required while the positioning system is operating.

The following data are available for monitoring.

- System monitoring:

Monitoring of the QD75 configuration and operation history (through the system monitor data [Md.1] through, [Md.19] [Md.50] through [Md.52] \*1)

\*1: [Md.50] through [Md.52] are for the QD75P□N/QD75D□N only.

- Axis operation monitoring:

Monitoring of the current position and speed, and other data related to the movements of axes (through the axis monitor data [Md.20] through [Md.48] \*2)

\*2: The axis monitor data are refreshed every 0.9ms (QD75P□N/QD75D□N) or 1.8ms (QD75P□/QD75D□). Note that " [Md.21] Machine feed value", " [Md.22] Feedrate", " [Md.28] Axis feedrate" and " [Md.30] External input/output signal" of QD75P□/QD75D□ are refreshed every 56.8ms. Also, " [Md.23] Valid M code", is updated when the "M code ON signal [X4, X5, X6, X7]" turns ON.

| Monitor the "instruction parameter" of the special start data when using special start                                                                                       | <a href="#">Md.37</a> Special start data instruction parameter setting value |
| Monitor the "start data No." of the special start data when using special start                                                                                              | <a href="#">Md.38</a> Start positioning data No. setting value               |
| Monitor the "positioning data No." executed last                                                                                                                             | <a href="#">Md.46</a> Last executed positioning data No.                     |
| Monitor the positioning data currently being executed                                                                                                                        | <a href="#">Md.47</a> Positioning data being executed                        |
| Monitor the movement amount after the current position control switching when using "speed-position switching control (INC mode)"                                            | <a href="#">Md.29</a> Speed-position switching control positioning amount    |
| Monitor switching from the constant speed status or acceleration status to the deceleration status during position control whose operation pattern is "Positioning complete" | <a href="#">Md.48</a> Deceleration start flag                                |

## 5.1.8 Types and roles of control data

Operation of the positioning system is achieved through the execution of necessary controls. (Data required for controls are given through the default values when the power is switched ON, which can be modified as required by the sequence program.) Controls are performed over system data or machine operation.

- Controlling the system data :

Performs write/initialization, etc. of the QD75 "setting data". (the system control data Cd.1 and Cd.2)

- Controlling the operation :

Setting operation parameters, changing speed during operation, interrupting or restarting operation (the system control data Cd.41 and Cd.42, and the axis control data Cd.3 to Cd.40)

## [1] Controlling the system data

## ■ Setting and resetting the setting data

| Control details                                    | Controlled data item                         |
|----------------------------------------------------|----------------------------------------------|
| Write setting data from buffer memory to flash ROM | <u>Cd.1</u> Flash ROM write request          |
| Reset (initialize) parameters                      | <u>Cd.2</u> Parameter initialization request |

## [2] Controlling the operation

## ■ Controlling the operation

| Control details                                                                              | Corresponding item                                                                      |
|----------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------|
| Set which positioning to execute (start No.)                                                 | <a href="#">Cd.3</a> Positioning start No.                                              |
| Clear (reset) the axis error ( <a href="#">Md.23</a> ) and warning ( <a href="#">Md.24</a> ) | <a href="#">Cd.5</a> Axis error reset                                                   |
| Issue instruction to restart (When axis operation is stopped)                                | <a href="#">Cd.6</a> Restart command                                                    |
| End current positioning (deceleration stop), and start next positioning                      | <a href="#">Cd.37</a> Skip command                                                      |

|                           |                                                                  | 1000 : 1000-fold                                                                                                                                                                                                                                |               |                                     |        |        |        |

**Pr.1** Unit setting

Set the unit used for defining positioning operations. Choose from the following units depending on the type of the control target: mm, inch, degree, or pulse. Different units can be defined for different axes (axis 1 to 4).

(Example) Different units (mm, inch, degree, and pulse) are applicable to different systems:

mm or inch..... X-Y table, conveyor (Select mm or inch depending on the machine specifications.)

degree ..... Rotating body (360 degrees/rotation)

pulse ..... X-Y table, conveyor

\* When you change the unit, note that the values of other parameters and data will not be changed automatically.

After changing the unit, check if the parameter and data values are within the allowable range.

Set "degree" to exercise speed-position switching control (ABS mode).

**Pr.2** to **Pr.4** Movement amount per pulse

These parameters define the amount of movement achieved by each single pulse within a pulse train output by the QD75.

The following paragraphs explain how to set the individual parameters **Pr.2**, **Pr.3**, and **Pr.4** assuming that the unit "mm" is selected with **Pr.1**.

The movement amount per pulse is given by the following expression:

$$\text{Movement amount per pulse} = \frac{\text{Movement amount per rotation (Al)}}{\text{No. of pulses per rotation (Ap)}}$$

- \* Due to the mechanical tolerance, the actual movement amount may differ slightly from the instructed movement amount. The error can be compensated by adjusting the movement amount per pulse defined here.  
(Refer to Section 12.3.2 "Electronic gear function".)

**POINT**

If the movement amount per pulse is less than 1, command frequency variations will occur. Smaller setting will increase variations and may cause machine vibration. If the movement amount per pulse becomes less than 1, also use the electronic gear function of the drive unit and make setting so that the movement amount per pulse is 1 or greater.

[Table 1]

| <b>Pr.1</b> setting value | Value set with peripheral device<br>(unit) | Value set with sequence program<br>(unit) * |
|---------------------------|--------------------------------------------|---------------------------------------------|
| 0 : mm                    | 0.1 to 6553.5 (μm)                         | 1 to 65535 (×10 <sup>-1</sup> μm)           |
| 1 : inch                  | 0.00001 to 0.65535 (inch)                  | 1 to 65535 (×10 <sup>-5</sup> inch)         |
| 2 : degree                | 0.00001 to 0.65535 (degree)                | 1 to 65535 (×10 <sup>-5</sup> degree)       |
| 3 : pulse                 | 1 to 65535 (pulse)                         | 1 to 65535 (pulse)                          |

- \* 1 to 32767 : Set as a decimal  
32768 to 65535 : Convert into hexadecimal and set

**Pr.2** No. of pulses per rotation (Ap)

Set the number of pulses required for a complete rotation of the motor shaft.

If you are using the Mitsubishi servo amplifier, set the value given as the "resolution per servomotor rotation" in the speed/position detector specifications.

No. of pulses per rotation (Ap) = Resolution per servomotor rotation

- \* When the "Resolution per servomotor revolution" of Mitsubishi servo amplifier exceeds 65535 pulses, make setting after referring to the Servo Amplifier Instruction Manual.

**Pr.3** Movement amount per rotation (Al), **Pr.4** Unit magnification (Am)

The amount how the workpiece moves with one motor rotation is determined by the mechanical structure.

If the worm gear lead (mm/rev) is PB and the deceleration rate is 1/n, then

$$\text{Movement amount per rotation (AL)} = \text{PB} \times 1/n$$

However, the maximum value that can be set for this "movement amount per rotation (AL)" parameter is 6553.5 $\mu$ m (approx. 6.5mm). Set the "movement amount per rotation (AL)" as shown below so that the "movement amount per rotation (AL)" does not exceed this maximum value.

$$\begin{aligned} \text{Movement amount per rotation (AL)} \\ &= \text{PB} \times 1/n \\ &= \text{Movement amount per rotation (AL)} \times \text{Unit magnification (Am)} \end{aligned}$$

Note) The unit magnification (Am) is a value of 1, 10, 100 or 1000. If the "PB  $\times$  1/n" value exceeds 6553.5 $\mu$ m, adjust with the unit magnification so that the "movement amount per rotation (AL)" does not exceed 6553.5 $\mu$ m.

#### Example 1)

When movement amount per rotation (AL) = PB  $\times$  1/n = 6000.0 $\mu$ m (= 6mm)

$$\begin{aligned} \text{Movement amount per rotation (AL)} \\ &= \text{Movement amount per rotation (AL)} \times \text{Unit magnification (Am)} \\ &= 6000.0\mu\text{m} \times 1 \text{ time} \end{aligned}$$

#### Example 2)

When movement amount per rotation (AL) = PB  $\times$  1/n = 60000.0 $\mu$ m (= 60mm)

$$\begin{aligned} \text{Movement amount per rotation (AL)} \\ &= \text{Movement amount per rotation (AL)} \times \text{Unit magnification (Am)} \\ &= 6000.0\mu\text{m} \times 10 \text{ times} \end{aligned}$$

**Pr.5** Pulse output mode

Set the pulse output mode to match the servo amplifier being used.

**IMPORTANT**

The only valid value of the " **Pr.5** Pulse output mode" is the value at the moment when the PLC READY signal [Y0] turns from OFF to ON for the first time after the power is switched ON or the CPU module is reset. Once the PLC READY signal [Y0] has been turned ON, the value will not be reset even if another value is set to the parameter and the PLC READY signal [Y0] is turned from OFF to ON.

Use " **Pr.23** Output signal logic selection" to choose between the positive logic (pulse rising edge detection) and negative logic (pulse falling edge detection). For the output specifications of each pulse output mode, refer to Section 3.4.1, (2) "Output specifications".

An example of the pulse output mode for positive and negative logic is shown below.

**(1) PULSE/SIGN mode**

| Positive logic                                                                                                                                                                                                                                                                | Negative logic                                                                                                                                                                                                                                                                |

|                                                                                                                                                                                                                                                                               |                                                                                                                                                                                                                                                                               |

**(2) CW/CCW mode**

During forward run, the forward run feed pulse (PULSE F) will be output.

During reverse run, the reverse run feed pulse (PULSE R) will be output.

| Positive logic | Negative logic |
|----------------|----------------|
|                |                |

## (3) A phase/B phase mode

Forward run and reverse run are controlled with the phase difference of the A phase (A $\phi$ ) and B phase (B $\phi$ ).

- When the B phase is 90° behind the A phase, the motor will forward run.
- When the B phase is 90° ahead of the A phase, the motor will reverse run.

## 1) For multiple of 1 setting

Example) When the command 1 pulse output is 1 pulse/s, the pulse rises and falls by four times per second.

## 2) For multiple of 4 setting

Example) When the command 1 pulse output is 1 pulse/s, the pulse rises and falls by one times per second.

**Pr.6** Rotation direction setting

Set the relation of the positioning direction (**Md.20** Current feed value increment direction/decrement direction) and the pulse output. For the relation of "Forward run pulse output, Reverse run pulse output" and "CW/A phase/PULSE signal, CCW/B phase/SIGN signal", refer to "**Pr.5** Pulse output mode".

**[Example]**

The following figure shows the pulse outputs of when "**Pr.5** Pulse output mode" is set to CW/CCW mode and the positioning with current feed value (increment direction)/(decrement direction) is executed.

**POINT**

When **Pr.6** has been changed from "0" to "1", check that the upper and lower limit switches operate properly by JOG operation.  
If any malfunction is identified, check and correct the wiring.

**Pr.7 Bias speed at start**

Set the bias speed (minimum speed) upon starting. The bias speed has to be defined to allow the motor to start smoothly especially when a stepping motor is used. (A stepping motor will not start smoothly if a low rotation speed is instructed at the beginning.)

The specified "bias speed at start" will be valid during the following operations:

- Positioning operation
- OPR operation
- JOG operation

Note that the bias speed should not exceed " **Pr.8** Speed limit value".

**■ Precautions for using a stepping motor**

- (1) For the system that uses a stepping motor, executing the S-curve acceleration/deceleration may cause step-out.  
Before using the S-curve acceleration/deceleration, confirm that step-out does not occur.
- (2) In the system that uses a stepping motor, the circular interpolation control cannot be carried out.  
Although setting the bias speed at start is required by the characteristics of the stepping motor, the setting of the bias speed at start is disabled for circular interpolation control.  
Ensure to use a servomotor for both 2 axes when the circular interpolation control is carried out.

| 1 : inch           | 0.001 to 2000000.000 (inch/min)                                                                                       | 1 to 2000000000 ( $\times 10^{-3}$ inch/min)                                             |
| 2 : degree         | 0.001 to 2000000.000 (degree/min)                                                                                     | 1 to 2000000000 ( $\times 10^{-3}$ degree/min)                                           |
| 3 : pulse          | [Select type * 2 is QD75P□]<br>1 to 200000 (pulse/s) * 1<br>[Select type * 2 is QD75D□]<br>1 to 1000000 (pulse/s) * 1 | [QD75P□N/QD75D□N]<br>1 to 4000000 (pulse/s)<br>[QD75P□/QD75D□]<br>1 to 1000000 (pulse/s) |

\* 1: In GX Configurator-QP, the QD75P□N/QD75D□N are recognized as the QD75P□/QD75D□. Therefore, the setting ranges are the same as those of the QD75P□/QD75D□. To set a value outside a setting range in GX Configurator-QP, set it through a sequence program or GX Works2. The setting ranges in GX Works2 are the same as those in sequence programs. (Refer to Appendix 1.2)

\* 2: For Select type, refer to GX Configurator-QP Operating Manual.

### Pr.8 Speed limit value

Set the maximum speed during positioning and OPR operations. If the specified speed exceeds speed limit value, positioning will be limited at the speed limit value. Set the speed limit value within the range of the following formula. If the speed limit value exceeds the range, the error "Out of speed limit value range" (error code: 910) will occur.

The command pulse frequency  
converted from the speed limit value  $\leq$  Max. output pulse \* 1

\* 1: QD75P□N/QD75P□: 200kpulse/s  
QD75D□N: 4Mpulse/s  
QD75D□: 1Mpulse/s

### Pr.9 Acceleration time 0, Pr.10 Deceleration time 0

" Pr.9 Acceleration time 0" specifies the time for the speed to increase from zero to " Pr.8 Speed limit value" (or " Pr.31 JOG speed limit value" during JOG operation).

" Pr.10 Deceleration time 0" specifies the time for the speed to decrease from " Pr.8 Speed limit value" (or " Pr.31 JOG speed limit value" during JOG operation) to zero.

- 1) If the positioning speed is set lower than the parameter-defined speed limit value, the actual acceleration/deceleration time will be relatively short. Thus, set the maximum positioning speed equal to or only a little lower than the parameter-defined speed limit value.
- 2) These settings are valid for OPR, positioning and JOG operations.
- 3) When the positioning involves interpolation, the acceleration/deceleration time defined for the reference axis is valid.

**Pr.11** Backlash compensation amount

The error that occurs due to backlash when moving the machine via gears can be compensated.

When the backlash compensation amount is set, pulses equivalent to the compensation amount will be output each time the direction changes during positioning.

- 1) The backlash compensation is valid after machine OPR. Thus, if the backlash compensation amount is set or changed, always carry out machine OPR once.
- 2) The backlash compensation amount setting range is 0 to 65535, but it should be set to 255 or less by using the following expression.

$$0 \leq \frac{\text{Backlash compensation amount}}{\text{Movement amount per pulse}} \leq 255$$

#### Pr.12 Software stroke limit upper limit value

Set the upper limit for the machine's movement range during positioning control.

#### Pr.13 Software stroke limit lower limit value

Set the lower limit for the machine's movement range during positioning control.

- 1) Generally, the OP is set at the lower limit or upper limit of the stroke limit.
- 2) By setting the upper limit value or lower limit value of the software stroke limit, overrun can be prevented in the software. However, an emergency stop limit switch must be installed nearby outside the range.
- 3) To invalidate the software stroke limit, set the setting value to "upper limit value = lower limit value". (The setting value can be anything in the setting range.)
- 4) When the unit is "degree", the software stroke limit check is invalid during speed control (including speed-position switching control, position-speed switching control) or during manual control.

#### Pr.14 Software stroke limit selection

Set whether to apply the software stroke limit on the "current feed value" or the "machine feed value". The software stroke limit will be validated according to the set value.

#### Pr.15 Software stroke limit valid/invalid setting

Set whether to validate the software stroke limit during JOG/Inching operation and manual pulse generator operation.

#### Pr.16 Command in-position width

Set the remaining distance that turns the command in-position ON. The command in-position signal is used as a front-loading signal of the positioning complete signal. When positioning control is started, the "command in-position flag" (3rd flag from right) in " Md.31 Status" turns OFF, and the "command in-position flag" turns ON at the set position of the command in-position signal.

**Pr.17** Torque limit setting value

Set the maximum value of the torque generated by the servomotor as a percentage between 1 and 500%.

\* The torque limit function limits the torque generated by the servomotor within the set range.

If the torque required for control exceeds the torque limit value, it is controlled with the set torque limit value.

**Usage conditions**

Limits for pulse train output type

- (a) A drive unit that can issue a torque limit command with the analog voltage is required.
- (b) The D/A conversion module and the D/A conversion module and drive unit must be wired.
- (c) The set " **Pr.17** Torque limit setting value" is set in the buffer memory " **Md.35** Torque limit stored value", so transmit that " **Md.35** Torque limit stored value" to the D/A conversion module with the sequence program.

[Table 1]

| <b>Pr.1</b> setting value | Value set with peripheral device<br>(unit) | Value set with sequence program<br>(unit)         |
|---------------------------|--------------------------------------------|---------------------------------------------------|
| 0 : mm                    | 0.1 to 214748364.7 ( $\mu\text{m}$ )       | 1 to 2147483647 ( $\times 10^{-1}\mu\text{m}$ )   |
| 1 : inch                  | 0.00001 to 21474.83647 (inch)              | 1 to 2147483647 ( $\times 10^{-5}\text{inch}$ )   |
| 2 : degree                | 0.00001 to 21474.83647 (degree)            | 1 to 2147483647 ( $\times 10^{-5}\text{degree}$ ) |
| 3 : pulse                 | 1 to 2147483647 (pulse)                    | 1 to 2147483647 (pulse)                           |

**Pr.18** M code ON signal output timing

This parameter sets the M code ON signal output timing.

Choose either WITH mode or AFTER mode as the M code ON signal output timing.

Note: If AFTER mode is used with speed control, an M code will not be output and the M code ON signal will not be turned ON.

An M code ([Da.10]) is a number between 0 and 65535 that can be assigned to each positioning data.

The sequence program can be coded to read an M code from the buffer memory address specified by "[Md.25] Valid M code" whenever the M code ON signal [X4, X5, X6, X7] turns ON so that a command for the sub work (e.g. clamping, drilling, tool change) associated with the M code can be issued.

The M code ON signal output timing can be set for each positioning data with the positioning option ("[Da.27] M code ON signal output timing") of the positioning data.

**Pr.19** Speed switching mode

Set whether to switch the speed switching mode with the standard switching or front-loading switching mode.

- 0 : Standard switching..... Switch the speed when executing the next positioning data.  
 1 : Front-loading switching..... The speed switches at the end of the positioning data currently being executed.

**Pr.20** Interpolation speed designation method

When carrying out linear interpolation/circular interpolation, set whether to designate the composite speed or reference axis speed.

- 0: Composite speed ..... The movement speed for the control target is designated, and the speed for each axis is calculated by the QD75.  
 1: Reference axis speed ..... The axis speed set for the reference axis is designated, and the speed for the other axis carrying out interpolation is calculated by the QD75.

**Note:** Always specify the reference axis speed if the 4-axis linear interpolation or 2 to 4 axis speed control has to be performed.

If you specify the composite speed for a positioning operation that involves the 4-axis linear interpolation or 2 to 4 axis speed control, the error "Interpolation mode error" (error code 523) will be output when the positioning operation is attempted.

For a positioning operation that involves the circular interpolation or 3-axis helical interpolation control, specify the composite speed.

The interpolation speed designation method can be set for each positioning data with the positioning option ("Da.29 Interpolation speed designation method") of the positioning data.

**Pr.21** Current feed value during speed control

Specify whether you wish to enable or disable the update of " **Md.20** Current feed value" while operations are performed under the speed control (including the speed-position and position-speed switching control).

0: The update of the current feed value is disabled

The current feed value will not change.

(The value at the beginning of the speed control will be kept.)

1: The update of the current feed value is enabled

The current feed value will be updated.

(The current feed value will change from the initial.)

2: The current feed value is cleared to zero

The current feed will be set initially to zero and change from zero while the speed control is in effect.

Note1: When the speed control is performed over two to four axes, the choice between enabling and disabling the update of " **Md.20** Current feed value" depends on how the reference axis is set.

Note2: Set "1" to exercise speed-position switching control (ABS mode).

**Pr.22** Input signal logic selection, **Pr.23** Output signal logic selection

Set the I/O signal logic that matches the signaling specification of the connected external device.

Note1: A mismatch in the signal logic will disable normal operation. Be careful of this when you change from the default value.

Note2: Set the manual pulse generator input logic selection (b8) to axis 1. (Setting of any of axes 2 to 4 is invalid.)

**Pr.24** Manual pulse generator input selection

Set the manual pulse generator input pulse mode. (Only the value specified against the axis 1 is valid.)

0: A-phase/B-phase; multiplied by 4

1: A-phase/B-phase; multiplied by 2

2: A-phase/B-phase; multiplied by 1

3: PULSE/SIGN

**Pr.150** Speed-position function selection

Select the mode of speed-position switching control.

0: INC mode

2: ABS mode

Note1: If the setting is other than 0 and 2, operation is performed in the INC mode with the setting regarded as 0.

**Pr.70** Positioning option valid/invalid setting

Enable or disable the data set in the positioning option ("Da.27 M code ON signal output timing", "Da.28 ABS direction in degrees", and

"Da.29 Interpolation speed designation method") of the positioning data.

Setting this parameter to "1: Valid" carries out a positioning control according to the data set in the positioning option.

0: Invalid

1: Valid

Note 1: If a value other than 0 and 1 is set, the set value is regarded as 0 and the data is disabled.

Note 2: If "0: Invalid" is set, the setting is ignored even though the positioning option of the positioning data is set.

Note 3: Pr.70 Positioning option valid/invalid setting can be set only with GX Works2 (Version 1.540N or later) or sequence programs.

**Pr.25** Acceleration time 1 to **Pr.27** Acceleration time 3

These parameters set the time for the speed to increase from zero to " **Pr.8** Speed limit value" (or " **Pr.31** JOG speed limit value" during JOG operation) during a positioning operation.

**Pr.28** Deceleration time 1 to **Pr.30** Deceleration time 3

These parameters set the time for the speed to decrease from " **Pr.8** Speed limit value" (or " **Pr.31** JOG speed limit value" during JOG operation) to zero during a positioning operation.

[Table 1]

| Pr.1 setting value | Value set with peripheral device (unit)                                                                               | Value set with sequence program (unit)                                                   |
|--------------------|-----------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------|
| 0 : mm             | 0.01 to 20000000.00 (mm/min)                                                                                          | 1 to 2000000000 ( $\times 10^{-2}$ mm/min)                                               |
| 1 : inch           | 0.001 to 2000000.000 (inch/min)                                                                                       | 1 to 2000000000 ( $\times 10^{-3}$ inch/min)                                             |
| 2 : degree         | 0.001 to 2000000.000 (degree/min)                                                                                     | 1 to 2000000000 ( $\times 10^{-3}$ degree/min)                                           |
| 3 : pulse          | [Select type * 1 is QD75P□]<br>1 to 200000 (pulse/s) * 2<br>[Select type * 1 is QD75D□]<br>1 to 1000000 (pulse/s) * 2 | [QD75P□N/QD75D□N]<br>1 to 4000000 (pulse/s)<br>[QD75P□/QD75D□]<br>1 to 1000000 (pulse/s) |

\* 1: For Select type, refer to GX Configurator-QP Operating Manual.

\* 2: In GX Configurator-QP, the QD75P□N/QD75D□N are recognized as the QD75P□/QD75D□. Therefore, the setting ranges are the same as those of the QD75P□/QD75D□. To set a value outside a setting range in GX Configurator-QP, set it through a sequence program or GX Works2. The setting ranges in GX Works2 are the same as those in sequence programs. (Refer to Appendix 1.2)

### Pr.31 JOG speed limit value

Set the maximum speed for JOG operation.

Note) • Set the "JOG speed limit value" to less than " Pr.8 Speed limit value".  
If the "speed limit value" is exceeded, the error "JOG speed limit value error" (error code: 956) will occur.

### Pr.32 JOG operation acceleration time selection

Set which of "acceleration time 0 to 3" to use for the acceleration time during JOG operation.

- 0 : Use value set in " Pr.9 Acceleration time 0".
- 1 : Use value set in " Pr.25 Acceleration time 1".
- 2 : Use value set in " Pr.26 Acceleration time 2".
- 3 : Use value set in " Pr.27 Acceleration time 3".

### Pr.33 JOG operation deceleration time selection

Set which of "deceleration time 0 to 3" to use for the deceleration time during JOG operation.

- 0 : Use value set in " Pr.10 Deceleration time 0".
- 1 : Use value set in " Pr.28 Deceleration time 1".
- 2 : Use value set in " Pr.29 Deceleration time 2".
- 3 : Use value set in " Pr.30 Deceleration time 3".

**Pr.34** Acceleration/deceleration process selection

Set whether to use trapezoid acceleration/deceleration or S-curve acceleration/deceleration for the acceleration/deceleration process.

Note) Refer to Section 12.7.6 "Acceleration/deceleration process function" for details.

&lt;Trapezoid acceleration/deceleration&gt;

&lt;S-curve acceleration/deceleration&gt;

For the system that uses a stepping motor, executing the S-curve acceleration/deceleration may cause step-out.

Before using the S-curve acceleration/deceleration, confirm that step-out does not occur.

**Pr.35** S-curve ratio

Set the S-curve ratio (1 to 100%) for carrying out the S-curve acceleration/deceleration process.

The S-curve ratio indicates where to draw the acceleration/deceleration curve using the sine curve as shown below.

**Pr.36** Sudden stop deceleration time

Set the time to reach speed 0 from " **Pr.8** Speed limit value" (or " **Pr.31** JOG speed limit value" during JOG operation) during the sudden stop.

The illustration below shows the relationships with other parameters.

**Pr.37** Stop group 1 sudden stop selection to **Pr.39** Stop group 3 sudden stop selection

Set the method to stop when the stop causes in the following stop groups occur.

- Stop group 1 ..... Stop with hardware stroke limit
- Stop group 2 ..... CPU module error occurrence, PLC READY signal [Y0] OFF, Fault in test mode
- Stop group 3 ..... External stop signal  
Stop signal from CPU module  
Stop signal from peripheral device  
Error occurrence (excludes errors in stop groups 1 and 2: includes only the software stroke limit errors during JOG operation, speed control, speed-position switching control, and position-speed switching control)

The methods of stopping include "0: Normal deceleration stop" and "1: Sudden stop".

If "1: Sudden stop" is selected, the axis will suddenly decelerate to a stop when the stop cause occurs.

**Pr.40** Positioning complete signal output time

Set the output time of the positioning complete signal [X14, X15, X16, X17] output from the QD75.

A positioning completes when the specified dwell time has passed after the QD75 had terminated the output.

For the interpolation control, the positioning completed signal of interpolation axis is output only during the time set to the reference axis.

Positioning complete signal output time

[Table 1]

| Pr.1 setting value | Value set with peripheral device<br>(unit) | Value set with sequence program<br>(unit)     |
|--------------------|--------------------------------------------|-----------------------------------------------|
| 0 : mm             | 0 to 10000.0 ( $\mu\text{m}$ )             | 0 to 100000 ( $\times 10^{-1}\mu\text{m}$ )   |
| 1 : inch           | 0 to 1.00000 (inch)                        | 0 to 100000 ( $\times 10^{-5}\text{inch}$ )   |
| 2 : degree         | 0 to 1.00000 (degree)                      | 0 to 100000 ( $\times 10^{-5}\text{degree}$ ) |
| 3 : pulse          | 0 to 100000 (pulse)                        | 0 to 100000 (pulse)                           |

**Pr.41** Allowable circular interpolation error width

With the "allowable circular interpolation error width", the allowable error range of the calculated arc path and end point address is set. \* 1

If the error of the calculated arc path and end point address is within the set range, circular interpolation will be carried out to the set end point address while compensating the error with spiral interpolation.

The allowable circular interpolation error width is set in the following axis buffer memory addresses.

- If axis 1 is the reference axis, set in the axis 1 buffer memory address [60, 61].
- If axis 2 is the reference axis, set in the axis 2 buffer memory address [210, 211].
- If axis 3 is the reference axis, set in the axis 3 buffer memory address [360, 361].
- If axis 4 is the reference axis, set in the axis 4 buffer memory address [510, 511].

\* 1: With circular interpolation control using the center point designation, the arc path calculated with the start point address and center point address and the end point address may deviate.

**Pr.42** External command function selection

Select a command with which the external command signal should be associated.

0: External positioning start

The external command signal input is used to start a positioning operation.

1: External speed change request

The external command signal input is used to change the speed in the current positioning operation. The new speed should be set in the " **Cd.14** New speed value"

2: Speed-position, position-speed switching request

The external command signal input is used to switch from the speed control to the position control while in the speed-position switching control mode, or from the position control to the speed control while in the position-speed switching control mode.

To enable the speed-position switching control, set the " **Cd.24** Speed-position switching enable flag" to "1".

To enable the position-speed switching control, set the " **Cd.26** Position-speed switching enable flag" to "1".

3: Skip request

The external command signal input is used skip the current positioning operation.

**POINT**

To enable the external command signal, set the " **Cd.8** External command enable" to "1".

## Pr.43 OPR method

Set the "OPR method" for carrying out machine OPR.

- 0 : Near-point dog method ..... After decelerating at the near-point dog ON, stop at the zero signal and complete the machine OPR.
- 1 : Stopper method 1) ..... After decelerating at the near-point dog ON, stop with the stopper, and complete the machine OPR after the dwell time has passed.
- 2 : Stopper method 2) ..... After decelerating at the near-point dog ON, stop with the stopper, and complete the machine OPR with the zero signal.
- 3 : Stopper method 3) ..... After starting with the creep speed, stop with the stopper, and complete the machine OPR with the zero signal.
- 4 : Count method 1) ..... After decelerating at the near-point dog ON, move the designated distance, and complete the machine OPR with the zero signal.
- 5 : Count method 2) ..... After decelerating at the near-point dog ON, move the designated distance, and complete the machine OPR.

Note) Refer to Section 8.2.2 "Machine OPR method" for details on the OPR methods.

## OPR method

## 0 : Near-point dog method

- (1) Start machine OPR.  
(Start movement at the " Pr.46 OPR speed" in the " Pr.44 OPR direction".)
- (2) Detect the near-point dog ON, and start deceleration.
- (3) Decelerate to " Pr.47 Creep speed", and move with the creep speed.  
(At this time, the near-point dog must be ON. If the near-point dog is OFF, the axis will decelerate to a stop.)
- (4) At the first zero signal (one pulse output at one motor revolution) after the near-point dog OFF, the pulse output from the QD75 stops, and the machine OPR is completed.

## 1 : Stopper method 1)

- (1) Start machine OPR.  
(Start movement at the " [Pr.46] OPR speed" in the " [Pr.44] OPR direction".)
- (2) Detect the near-point dog ON, and start deceleration.
- (3) Decelerate to " [Pr.47] Creep speed", and move with the creep speed.  
(At this time " [Pr.54] OPR torque limit value" is required. If the torque is not limited, the servomotor could be damaged in step (4).)
- (4) The axis contacts against the stopper at " [Pr.47] Creep speed", and then stops.
- (5) When the near-point dog turns ON and the " [Pr.49] OPR dwell time" is passed, the pulse output from the QD75 stops, and the machine OPR is completed.

## 2 : Stopper method 2)

- (1) Start machine OPR.  
(Start movement at the " [Pr.46] OPR speed" in the " [Pr.44] OPR direction".)
- (2) Detect the near-point dog ON, and start deceleration.
- (3) Decelerate to " [Pr.47] Creep speed", and move with the creep speed.  
(At this time " [Pr.54] OPR torque limit value" is required. If the torque is not limited, the servomotor could be damaged in step (4).)
- (4) The axis contacts against the stopper at " [Pr.47] Creep speed", and then stops.
- (5) After stopping, the pulse output from the QD75 stops with the zero signal (signal that is output on detection of contact with the stopper. Input externally), and the machine OPR is completed.

## 3 : Stopper method 3)

- (1) Start machine OPR.  
(Start movement at the " [Pr.47] Creep speed" in the " [Pr.44] OPR direction". At this time " [Pr.54] OPR torque limit value" is required. If the torque is not limited, the servomotor could be damaged in step (2).)
- (2) The axis contacts against the stopper at " [Pr.47] Creep speed", and then stops.
- (3) After stopping, the pulse output from the QD75 stops with the zero signal (signal that is output on detection of contact with the stopper. Input externally), and the machine OPR is completed.

## 4 : Count method 1)

- (1) Start machine OPR.  
(Start movement at the " [Pr.46] OPR speed" in the " [Pr.44] OPR direction".)
- (2) Detect the near-point dog ON, and start deceleration.
- (3) Decelerate to " [Pr.47] Creep speed", and move with the creep speed.
- (4) After the near-point dog turns ON and the movement amount set in " [Pr.50] Setting for the movement amount after near-point dog ON" has passed, the pulse output from the QD75 stops with the first zero signal (one pulse output at one motor revolution), and the machine OPR is completed.

## 5 : Count method 2)

- (1) Start machine OPR.  
(Start movement at the " [Pr.46] OPR speed" in the " [Pr.44] OPR direction".)
- (2) Detect the near-point dog ON, and start deceleration.
- (3) Decelerate to " [Pr.47] Creep speed", and move with the creep speed.
- (4) After the near-point dog turns ON and the movement amount set in " [Pr.50] Setting for the movement amount after near-point dog ON" has passed, the pulse output from the QD75 stops with the first zero signal, and the machine OPR is completed.

**Pr.44** OPR direction

Set the direction to start movement when starting machine OPR.

0: Positive direction (address increment direction)

Moves in the direction that the address increments. (Arrow 2))

1: Negative direction (address decrement direction)

Moves in the direction that the address decrements. (Arrow 1))

Normally, the OP is set near the lower limit or the upper limit, so " **Pr.44** OPR direction" is set as shown below.

[Table 1]

| <b>Pr.1</b> setting value | Value set with peripheral device (unit) | Value set with sequence program(unit)                     |
|---------------------------|-----------------------------------------|-----------------------------------------------------------|

[Table 2]

| <b>Pr.1</b> setting value | Value set with peripheral device (unit) | Value set with sequence program (unit)                                                   |
|---------------------------|-----------------------------------------|------------------------------------------------------------------------------------------|
| 0 : mm                    | 0.01 to 20000000.00 (mm/min)            | 1 to 2000000000 ( $\times 10^{-2}\text{mm/min}$ )                                        |
| 1 : inch                  | 0.001 to 2000000.000 (inch/min)         | 1 to 2000000000 ( $\times 10^{-3}\text{inch/min}$ )                                      |
| 2 : degree                | 0.001 to 2000000.000 (degree/min)       | 1 to 2000000000 ( $\times 10^{-3}\text{degree/min}$ )                                    |
| 3 : pulse                 | 1 to 1000000 (pulse/s) * 1              | [QD75P□N/QD75D□N]<br>1 to 4000000 (pulse/s)<br>[QD75P□/QD75D□]<br>1 to 1000000 (pulse/s) |

\* 1: In GX Configurator-QP, the QD75P□N/QD75D□N are recognized as the QD75P□/QD75D□. Therefore, the setting ranges are the same as those of the QD75P□/QD75D□. To set a value outside a setting range in GX Configurator-QP, set it through a sequence program or GX Works2. The setting ranges in GX Works2 are the same as those in sequence programs. (Refer to Appendix 1.2)

**Pr.45** OP address

Set the address used as the reference point for positioning control (ABS system).  
 (When the machine OPR is completed, the stop position address is changed to the address set in " **Pr.45** OP address". At the same time, the " **Pr.45** OP address" is stored in " **Md.20** Current feed value" and " **Md.21** Machine feed value".)

**Pr.46** OPR speed

Set the speed for OPR.

Note) Set the "OPR speed" to less than " **Pr.8** Speed limit value". If the "speed limit value" is exceeded, the error "Out of speed limit value range" (error code: 910) occurs and OPR is not performed.

The "OPR speed" should be equal to or faster than the " **Pr.7** Bias speed at start" and " **Pr.47** Creep speed".

|                             | 1 : Retry OPR with limit switch                                                                                                                                                                                                                   | 1                               |               |                                     |            |            |            |

**Pr.47** Creep speed

Set the creep speed after near-point dog ON (the low speed just before stopping after decelerating from the OPR speed).

The creep speed is set within the following range.

$$(\text{Pr.46 OPR speed}) \geq (\text{Pr.47 Creep speed}) \geq (\text{Pr.7 Bias speed at start})$$

Note) The creep speed is related to the detection error when using the OPR method with zero signal, and the size of the collision if a collision occurs during OPR method using the stopper method.

[Table 1]

| Pr.1 setting value | Value set with peripheral device (unit) | Value set with sequence program (unit)                                                   |
|--------------------|-----------------------------------------|------------------------------------------------------------------------------------------|
| 0 : mm             | 0.01 to 2000000.00 (mm/min)             | 1 to 200000000 ( $\times 10^{-2}$ mm/min)                                                |
| 1 : inch           | 0.001 to 2000000.000 (inch/min)         | 1 to 200000000 ( $\times 10^{-3}$ inch/min)                                              |
| 2 : degree         | 0.001 to 2000000.000 (degree/min)       | 1 to 200000000 ( $\times 10^{-3}$ degree/min)                                            |
| 3 : pulse          | 1 to 1000000 (pulse/s) * 1              | [QD75P□N/QD75D□N]<br>1 to 4000000 (pulse/s)<br>[QD75P□/QD75D□]<br>1 to 1000000 (pulse/s) |

\* 1: In GX Configurator-QP, the QD75P□N/QD75D□N are recognized as the QD75P□/QD75D□. Therefore, the setting ranges are the same as those of the QD75P□/QD75D□. To set a value outside a setting range in GX Configurator-QP, set it through a sequence program or GX Works2. The setting ranges in GX Works2 are the same as those in sequence programs. (Refer to Appendix 1.2)

**Pr.48** OPR retry

Set whether to carry out OPR retry.

When the OPR retry function is validated and the machine OPR is started, first the axis will move in the OPR direction (1)). If the upper/lower limit signal turns OFF before the near-point dog signal ON is detected (2)), the axis will decelerate to a stop, and then will move in the direction opposite to the specified OPR direction (3)). If the falling edge of the near-point dog signal is detected during movement in the opposite direction, the axis will decelerate to a stop (4)), and will carry out machine OPR again (5)), (6)).

## 5.2.6 OPR detailed parameters

|                                                                         | 3 : <b>Pr.30</b> Deceleration time 3                                                                                                                                                                                                                   | 3                                                                                                           |               |                                     |            |            |            |

**Pr.49** OPR dwell time

When stopper method 1) is set for " **Pr.43** OPR method", set the time for the machine OPR to complete after the near-point dog signal turns ON.  
The setting value must be longer than the movement time from the near-point dog signal ON to stopping with the stopper.  
(If the OPR method is not "stopper method 1)", the " **Pr.49** OPR dwell time" value is irrelevant.)

**Pr.50** Setting for the movement amount after near-point dog ON

When using the count method 1) or 2), set the movement amount to the OP after the near-point dog signal turns ON.  
(The movement amount after near-point dog ON should be equal to or greater than the sum of the "distance covered by the deceleration from the OPR speed to the creep speed" and "distance of movement in 10ms at the OPR speed".)

[Table 1]

| [Pr.1] setting value | Value set with peripheral device<br>(unit) | Value set with sequence program<br>(unit)  |
|----------------------|--------------------------------------------|--------------------------------------------|
| 0 : mm               | 0 to 214748364.7 (μm)                      | 0 to 2147483647 (×10 <sup>-1</sup> μm)     |
| 1 : inch             | 0 to 21474.83647 (inch)                    | 0 to 2147483647 (×10 <sup>-5</sup> inch)   |
| 2 : degree           | 0 to 21474.83647 (degree)                  | 0 to 2147483647 (×10 <sup>-5</sup> degree) |
| 3 : pulse            | 0 to 2147483647 (pulse)                    | 0 to 2147483647 (pulse)                    |

Example of setting for "[Pr. 50] Setting for the movement amount after near-point dog ON"

Assuming that the "[Pr. 8] Speed limit value" is set to 200 kpulse/s, "[Pr. 46] OPR speed" to 10 kpulse/s, "[Pr. 47] Creep speed" to 1 kpulse/s, and deceleration time to 300 ms, the minimum value of "[Pr. 50] Setting for the movement amount after near-point dog ON" is calculated as follows:

### [Pr.51] OPR acceleration time selection

Set which of "acceleration time 0 to 3" to use for the acceleration time during OPR.

- 0 : Use the value set in "[Pr.9] Acceleration time 0".
- 1 : Use the value set in "[Pr.25] Acceleration time 1".
- 2 : Use the value set in "[Pr.26] Acceleration time 2".
- 3 : Use the value set in "[Pr.27] Acceleration time 3".

### [Pr.52] OPR deceleration time selection

Set which of "deceleration time 0 to 3" to use for the deceleration time during OPR.

- 0 : Use the value set in "[Pr.10] Deceleration time 0".
- 1 : Use the value set in "[Pr.28] Deceleration time 1".
- 2 : Use the value set in "[Pr.29] Deceleration time 2".
- 3 : Use the value set in "[Pr.30] Deceleration time 3".

**Pr.53** OP shift amount

Set the amount to shift (move) from the position stopped at with machine OPR.

\* The OP shift function is used to compensate the OP position stopped at with machine OPR.

If there is a physical limit to the OP position, due to the relation of the near-point dog installation position, use this function to compensate the OP to an optimum position.

[Table 1]

| Pr.1 setting value | Value set with peripheral device<br>(unit)    | Value set with sequence program<br>(unit)                   |
|--------------------|-----------------------------------------------|-------------------------------------------------------------|
| 0 : mm             | -214748364.8 to 214748364.7 ( $\mu\text{m}$ ) | -2147483648 to 2147483647 ( $\times 10^{-1}\mu\text{m}$ )   |
| 1 : inch           | -21474.83648 to 21474.83647 (inch)            | -2147483648 to 2147483647 ( $\times 10^{-5}\text{inch}$ )   |
| 2 : degree         | -21474.83648 to 21474.83647 (degree)          | -2147483648 to 2147483647 ( $\times 10^{-5}\text{degree}$ ) |
| 3 : pulse          | -2147483648 to 2147483647 (pulse)             | -2147483648 to 2147483647 (pulse)                           |

**Pr.54** OPR torque limit value

Set the value to limit the servomotor torque after reaching the creep speed during machine OPR.

Refer to Section 12.4.2 "Torque limit function" for details on the torque limits.

**Pr.55** Deviation counter clear signal output time

Set the duration of the deviation counter clear signal output during a machine OPR operation using any of the following methods: the near-point dog method, stopper methods 1) to 3), and count method 1). (For details, refer to your drive unit manual.)

**Pr.56** Speed designation during OP shift

Set the operation speed for when a value other than "0" is set for " **Pr.53** OP shift amount". Select the setting from " **Pr.46** OPR speed" or " **Pr.47** Creep speed".

0 : Designate " **Pr.46** OPR speed" as the setting value.

1 : Designate " **Pr.47** Creep speed" as the setting value.

**Pr.57** Dwell time during OPR retry

When OPR retry is validated (when "1" is set for **Pr.48**), set the stop time after decelerating in 2) and 4) in the following drawing.

## 5.3 List of positioning data

Before explaining the positioning data setting items **Da.1** to **Da.10**, the configuration of the positioning data will be shown below.

Before the explanation on the positioning data setting items **Da.1** to **Da.10** and **Da.27** to **Da.29**, the configuration of the positioning data will be shown below.

The positioning data stored in the QD75 buffer memory has the following type of configuration.

| Positioning data No. |                                                        | 1            | 2            | 3            | ... | 599          | 600          |
|----------------------|--------------------------------------------------------|--------------|--------------|--------------|-----|--------------|--------------|

• Up to 600 positioning data for each axis can be set (stored) in the buffer memory addresses shown on the left. These data are controlled as positioning data No.1 to No.600 for each axis.

• One positioning data is configured of the items shown in the bold box.

| Positioning data No. |                                                        | 1            | 2            | 3            | ... | 599            | 600            |

|                      | <b>Da.7</b><br>Arc address                             | 8008<br>8009 | 8018<br>8019 | 8028<br>8029 | ... | 13988<br>13989 | 13998<br>13999 |

The descriptions that follow relate to the positioning data set items ([Da.1] to [Da.10], [Da.27] to [Da.29]).

(The buffer memory addresses shown are those of the "positioning data No. 1" for the axes 1 to 4.)

## Positioning identifier configuration

The positioning identifier consists of "[Da.1] Operation pattern" to "[Da.5] Axis to be interpolated". The set values of those data are stored in one buffer memory address.

Consider the positioning identifier configuration in the figure below when setting "[Da.1] Operation pattern" to "[Da.5] Axis to be interpolated".

| Positioning identifier configuration | Assignment |                                |
|--------------------------------------|------------|--------------------------------|
|                                      | (1)        | [Da.1] Operation pattern       |
|                                      | (2)        | [Da.5] Axis to be interpolated |
|                                      | (3)        | [Da.3] Acceleration time No.   |
|                                      | (4)        | [Da.4] Deceleration time No.   |
|                                      | (5)        | [Da.2] Control system          |

The following table lists the setting range and default value of each buffer memory area of the positioning identifier.

| Item                   | Setting value                          |                                                                               | Default value | Setting value buffer memory address |        |        |        |
|------------------------|----------------------------------------|-------------------------------------------------------------------------------|---------------|-------------------------------------|--------|--------|--------|
|                        | Value set with peripheral device       | Value set with sequence program                                               |               | Axis 1                              | Axis 2 | Axis 3 | Axis 4 |
| Positioning identifier | <b>Da.1</b><br>Operation pattern       | 00: Positioning complete                                                      | 00            |                                     |        |        |        |

|                        |                                        |                                                                               | 0000H         | 2000                                | 8000   | 14000  | 20000  |

**Da.1** Operation pattern

The operation pattern designates whether positioning of a certain data No. is to be ended with just that data, or whether the positioning for the next data No. is to be carried out in succession.

[Operation pattern]

- 1) Positioning complete..... Set to execute positioning to the designated address, and then complete positioning.
- 2) Continuous positioning control ..... Positioning is carried out successively in order of data Nos. with one start signal. The operation halts at each position indicated by a positioning data.
- 3) Continuous path control..... Positioning is carried out successively in order of data Nos. with one start signal. The operation does not stop at each positioning data.

**Da.2** Control system

Set the "control system" for carrying out positioning control.

- Note)
- When "JUMP instruction" is set for the control system, the " **Da.9** Dwell time" and " **Da.10** M code" setting details will differ.
  - In case you selected "LOOP" as the control system, the " **Da.10** M code" should be set differently from other cases.
  - Refer to CHAPTER 9 "MAJOR POSITIONING CONTROL" for details on the control systems.
  - If "degree" is set for " **Pr.1** Unit setting", circular interpolation control or 3-axis helical interpolation control cannot be carried out. The error "Circular interpolation not possible" (error code: 535) will occur when executed.
  - The 3-axis helical interpolation control can be set only for the QD75N with a serial number (first five digits) of "17102" or later. If the 3-axis helical interpolation control is set for the QD75N with a serial number (first five digits) earlier than "17102", the error "Control system setting error" (error code: 524) will occur.

**Da.3** Acceleration time No.

Set which of "acceleration time 0 to 3" to use for the acceleration time during positioning.

- 0 : Use the value set in " **Pr.9** Acceleration time 0".
- 1 : Use the value set in " **Pr.25** Acceleration time 1".
- 2 : Use the value set in " **Pr.26** Acceleration time 2".
- 3 : Use the value set in " **Pr.27** Acceleration time 3".

**Da.4** Deceleration time No.

Set which of "deceleration time 0 to 3" to use for the deceleration time during positioning.

- 0 : Use the value set in " **Pr.10** Deceleration time 0".
- 1 : Use the value set in " **Pr.28** Deceleration time 1".
- 2 : Use the value set in " **Pr.29** Deceleration time 2".
- 3 : Use the value set in " **Pr.30** Deceleration time 3".

**Da.5** Axis to be interpolated

Set the target axis (partner axis) for operations under the 2-axis interpolation control, and the circular interpolation axis for operations under the 3-axis helical interpolation control.

0 : Selects the axis 1 as the target axis (partner axis).

1 : Selects the axis 2 as the target axis (partner axis).

2 : Selects the axis 3 as the target axis (partner axis).

3 : Selects the axis 4 as the target axis (partner axis).

- Note)
- Do not specify the own axis number or any number except the above. (If you do, the error "Illegal interpolation description command" (error code: 521) will occur during the program execution.)
  - For 3-axis interpolation other than 3-axis helical interpolation control or 4-axis interpolation, this item does not need to be set.
  - The following table lists the target axes for the 3-axis helical interpolation control.

| Reference axis | Circular interpolation axis | Linear interpolation axis |
|----------------|-----------------------------|---------------------------|
| Axis 1         | Axis 2                      | Axis 3                    |
|                | Axis 3                      | Axis 2                    |
| Axis 2         | Axis 3                      | Axis 4                    |
|                | Axis 4                      | Axis 3                    |
| Axis 3         | Axis 4                      | Axis 1                    |
|                | Axis 1                      | Axis 4                    |
| Axis 4         | Axis 1                      | Axis 2                    |
|                | Axis 2                      | Axis 1                    |

**Da.6** Positioning address/movement amount

Set the address to be used as the target value for positioning control.  
The setting value range differs according to the " **Da.2** Control system".  
((1) to (4))

**(1) Absolute (ABS) system, current value changing**

- The setting value (positioning address) for the ABS system and current value changing is set with an absolute address (address from OP).

**(2) Incremental (INC) system, fixed-feed 1, fixed-feed 2, fixed-feed 3, fixed-feed 4**

- The setting value (movement amount) for the INC system is set as a movement amount with sign.

When movement amount is positive: Moves in the positive direction (address increment direction)

When movement amount is negative: Moves in the negative direction (address decrement direction)

[Table 1]

■ When " Pr.1 Unit Setting" is "mm"

The table below lists the control systems that require the setting of the positioning address or movement amount and the associated setting ranges.

(With any control system excluded from the table below, neither the positioning address nor the movement amount needs to be set.)

| Da.2 setting value                                                                                                                                                           | Value set with peripheral device<br>( $\mu\text{m}$ )    | Value set with sequence program * 1<br>( $\times 10^{-1}\mu\text{m}$ ) |

\* 1: Set an integer because the sequence program cannot handle fractions.  
(The value will be converted properly within the system.)

## (3) Speed-position switching control

- INC mode:  
Set the amount of movement after the switching from speed control to position control.
- ABS mode:  
Set the absolute address which will be the target value after speed control is switched to position control. (The unit is "degree" only)

## (4) Position-speed switching control

- Set the amount of movement before the switching from position control to speed control.

■ When " Pr.1 Unit Setting" is "degree"

The table below lists the control systems that require the setting of the positioning address or movement amount and the associated setting ranges.

(With any control system excluded from the table below, neither the positioning address nor the movement amount needs to be set.)

| <span style="border: 1px solid black; padding: 0 2px;">Da.2</span> setting value                                                                                             | Value set with peripheral device<br>(degree)                                                                       | Value set with sequence program * 1<br>( $\times 10^{-5}$ degree)                                                |

### **Da.7** Arc address

The arc address is data required only when the circular interpolation control or 3-axis helical interpolation control is carried out.

- (1) When carrying out circular interpolation with sub point designation, set the sub point (passing point) address as the arc address.
- (2) When carrying out circular interpolation with center point designation, set the center point address of the arc as the arc address.

When the circular interpolation control or 3-axis helical interpolation control is not carried out, the value set in "**Da.7** Arc address" will be invalid.

[Table 1]

## ■ When " [Pr.1] Unit Setting" is "mm"

The table below lists the control systems that require the setting of the arc address and shows the setting range.

(With any control system excluded from the table below, the arc address does not need to be set.)

| [Da.2] setting value                                                                                              | Value set with peripheral device (μm)                        | Value set with sequence program * 1 (×10 <sup>-1</sup> μm) |
|-------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------|------------------------------------------------------------|
| ABS circular sub : 0D <sub>H</sub><br>ABS circular right : 0F <sub>H</sub><br>ABS circular left : 10 <sub>H</sub> | ◇ Set the address<br>-214748364.8 to 214748364.7             | ◇ Set the address<br>-2147483648 to 2147483647             |
| INC circular sub : 0E <sub>H</sub><br>INC circular right : 11 <sub>H</sub><br>INC circular left : 12 <sub>H</sub> | ◇ Set the movement amount<br>-214748364.8 to 214748364.7     | ◇ Set the movement amount<br>-2147483648 to 2147483647     |
| ABS helical sub : 20 <sub>H</sub><br>ABS helical right : 22 <sub>H</sub><br>ABS helical left : 23 <sub>H</sub>    | ◇ Set the address<br>-214748364.8 to 214748364.7             | ◇ Set the address<br>-2147483648 to 2147483647             |
| INC helical sub : 21 <sub>H</sub><br>INC helical right : 24 <sub>H</sub><br>INC helical left : 25 <sub>H</sub>    | ◇ Set the movement amount<br>-214748364.8 to 214748364.7 * 2 | ◇ Set the movement amount<br>-2147483648 to 2147483647 * 2 |

\* 1: Set an integer because the sequence program cannot handle fractions.  
(The value will be converted properly within the system.)

\* 2: Note that the maximum radius that circular interpolation control is possible is 536870912, although the setting value can be input within the range shown in the above table, as an arc address.

## ■ When " [Pr.1] Unit Setting" is "degree"

No control system requires the setting of the arc address by "degree".

## ■ When " [Pr.1] Unit Setting" is "pulse"

The table below lists the control systems that require the setting of the arc address and shows the setting range.

(With any control system excluded from the table below, the arc address does not need to be set.)

| [Da.2] setting value                                                                                              | Value set with peripheral device (pulse)                   | Value set with sequence program (pulse)                    |
|-------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------|------------------------------------------------------------|
| ABS circular sub : 0D <sub>H</sub><br>ABS circular right : 0F <sub>H</sub><br>ABS circular left : 10 <sub>H</sub> | ◇ Set the address<br>-2147483648 to 2147483647             | ◇ Set the address<br>-2147483648 to 2147483647             |

|                               | No. of LOOP to LEND repetitions       |                                                                                                                                                                                                                                                                                                                                                                      |                                 |               |                                     |              |                |                |

**Da.8 Command speed**

Set the command speed for positioning.

- (1) If the set command speed exceeds " Pr.8 Speed limit value", positioning will be carried out at the speed limit value.
- (2) If "-1" is set for the command speed, the current speed (speed set for previous positioning data No.) will be used for positioning control. Use the current speed for uniform speed control, etc. If "-1" is set for continuing positioning data, and the speed is changed, the following speed will also change.

(Note that when starting positioning, if the "-1" speed is set for the positioning data that carries out positioning control first, the error "No command speed" (error code: 503) will occur, and the positioning will not start.  
Refer to Section 15.3 "List of errors" for details on the errors.)

**Da.10** M code (or condition data No./No. of LOOP to LEND repetitions)

Set an "M code", a "condition data No. ", or the "number of LOOP to LEND repetitions" depending on how the " **Da.2** Control system" is set.

- If a method other than "JUMP instruction" and "LOOP" is selected as the " **Da.2** Control system"
  - ..... Set an "M code".
    - If no "M code" needs to be output, set "0" (default value).
- If "3-axis helical interpolation control" is selected as the " **Da.2** Control system": Set the number of pitch for the linear interpolation axis. Set the rotation speed of the circular interpolation as the number of pitch.
- If "JUMP instruction" is selected as the " **Da.2** Control system"
  - ..... Set the "condition data No." for JUMP.
    - 0 : Unconditional JUMP to the positioning data specified by **Da.9**.
    - 1 to 10 : JUMP performed according to the condition data No. specified (a number between 1 and 10).
- If "LOOP" is selected as the " **Da.2** Control system"
  - ..... Set the number of LOOP to LEND repetitions by a number other than "0".
    - The error "Control system LOOP setting error" (error code: 545) will occur if you specify "0".

\* The condition data specifies the condition for the JUMP instruction to be executed.

(A JUMP will take place when the condition is satisfied.)

[Table 1]

| <b>Pr.1</b> setting value | Value set with peripheral device<br>(unit) | Value set with sequence program<br>(unit)                                               |
|---------------------------|--------------------------------------------|-----------------------------------------------------------------------------------------|
| 0 : mm                    | 0.01 to 20000000.00 (mm/min)               | 1 to 2000000000 ( $\times 10^{-2}$ mm/min)                                              |
| 1 : inch                  | 0.001 to 2000000.000 (inch/min)            | 1 to 2000000000 ( $\times 10^{-3}$ inch/min)                                            |
| 2 : degree                | 0.001 to 2000000.000 (degree/min)          | 1 to 2000000000 ( $\times 10^{-3}$ degree/min)                                          |
| 3 : pulse                 | 1 to 1000000 (pulse/s) * 1                 | [QD75P□/QD75D□N]<br>1 to 4000000 (pulse/s)<br>[QD75P□/QD75D□]<br>1 to 1000000 (pulse/s) |

\* 1: In GX Configurator-QP, the QD75P□/QD75D□N are recognized as the QD75P□/QD75D□. Therefore, the setting ranges are the same as those of the QD75P□/QD75D□. To set a value outside a setting range in GX Configurator-QP, set it through a sequence program or GX Works2. The setting ranges in GX Works2 are the same as those in sequence programs. (Refer to Appendix 1.2)

[Table 2]

| <b>Da.2</b> setting value   | Setting item         | Value set with peripheral device | Value set with sequence program |
|-----------------------------|----------------------|----------------------------------|---------------------------------|
| JUMP instruction: 82H       | Positioning data No. | 1 to 600                         | 1 to 600                        |
| Other than JUMP instruction | Dwell time           | 0 to 65535 (ms)                  | 0 to 65535 (ms)                 |

[Table 3]

| <b>Da.2</b> setting value         | Setting item       | Value set with peripheral device | Value set with sequence program |
|-----------------------------------|--------------------|----------------------------------|---------------------------------|
| JUMP instruction: 82H             | Condition data No. | 0 to 10                          | 0 to 10                         |
| LOOP: 83H                         | Repetition count   | 1 to 65535                       | 1 to 65535                      |
| Helical interpolation: 20H to 25H | Number of pitch    | 0 to 999                         | 0 to 999                        |
| Other than the above              | M code             | 0 to 65535                       | 0 to 65535                      |

**Da.9** Dwell time (JUMP designation positioning data No.)

Set the "dwell time" or "positioning data No." corresponding to the "**Da.2** Control system".

- When a method other than "JUMP instruction " is set for "**Da.2** Control system"

..... Set the "dwell time".

- When "JUMP instruction " is set for "**Da.2** Control system"

..... Set the "positioning data No." for the JUMP destination.

When the "dwell time" is set, the setting details of the "dwell time" will be as follows according to "**Da.1** Operation pattern".

| Item               |                                                 | Setting value, setting range                                              |                                 | Default value | Setting value buffer memory address |        |        |        |

|                    |                                                 | 1: ABS clockwise                                                          | 1                               |               |                                     |        |        |        |
|                    |                                                 | 2: ABS counterclockwise                                                   | 2                               |               |                                     |        |        |        |
|                    |                                                 | 3: Takes a shortcut. (direction setting ignored)                          | 3                               |               |                                     |        |        |        |
|                    | Da.29<br>Interpolation speed designation method | 0: Use the set value in "[Pr.20] Interpolation speed designation method". | 0                               | 0             |                                     |        |        |        |
|                    |                                                 | 1: Composite speed                                                        | 1                               |               |                                     |        |        |        |
|                    |                                                 | 2: Reference axis speed                                                   | 2                               |               |                                     |        |        |        |

### Positioning option configuration

The positioning option consists of "Da.27 M code ON signal output timing" to "Da.29 Interpolation speed designation method". The set values of those data are stored in one buffer memory address. Consider the positioning option configuration in the figure below when setting "Da.27 M code ON signal output timing" to "Da.29 Interpolation speed designation method".

| Positioning option configuration | Assignment                                       |
|----------------------------------|--------------------------------------------------|
|                                  | (1) Da.27 M code ON signal output timing         |
|                                  | (2) Da.28 ABS direction in degrees               |
|                                  | (3) Da.29 Interpolation speed designation method |
|                                  | (4) Use prohibited (fixed to 0)                  |

#### Da.27 M code ON signal output timing

Set the M code ON signal output timing for each positioning data.

#### Da.28 ABS direction in degrees

Set the ABS moving direction when "degree" is selected as the unit for each positioning data.

#### Da.29 Interpolation speed designation method

Set the interpolation speed designation method for each positioning data.

### POINTS

- (1) To use the positioning option, set "1: Valid" in Pr.70 Positioning option valid/invalid setting.
- (2) The positioning option can be set only with GX Works2 (Version 1.540N or later) or sequence programs.
- (3) The positioning option can be set only for the QD75N with a serial number (first five digits) of "17102" or later. If a value is set for the positioning option of the QD75N with a serial number (first five digits) earlier than "17102" and a positioning control is started, the value set in the positioning option is ignored.

5.4 List of block start data

The illustrations below show the organization of the block start data stored in the QD75 buffer memory. The block start data setting items **Da.11** to **Da.14** are explained in the pages that follow.

- Up to 50 block start data points can be set (stored) for each axis in the buffer memory addresses shown on the left.
  - Items in a single unit of block start data are shown included in a bold frame. **□**
  - Each axis has five start blocks (block Nos. 0 to 4).
- \* For information on the organization of the buffer memory addresses assigned to the start blocks 1 to 4, refer to Appendix 13 "List of buffer memory addresses".

The pages that follow explain the block start data setting items (Da.11 to Da.14).  
 (The buffer memory addresses shown are those of the "1st point block start data (block No. 7000)" for the axes 1 to 4.)

**REMARK**

To perform an high-level positioning control using block start data, set a number between 7000 and 7004 to the " [Cd.3] Positioning start No." and use the " [Cd.4] Positioning starting point No." to specify a point number between 1 and 50, a position counted from the beginning of the block.

The number between 7000 and 7004 specified here is called the "block No.".

With the QD75, up to 50 "block start data" points and up to 10 "condition data" items can be assigned to each "block No.".

| Block No. * | Axis   | Block start data | Condition                | Buffer memory         | GX Configurator-QP    |
|-------------|--------|------------------|--------------------------|-----------------------|-----------------------|
| 7000        | Axis 1 | Start block 0    | Condition data (1 to 10) | Supports the settings | Supports the settings |
|             | Axis 2 |                  | Condition data (1 to 10) |                       |                       |
|             | Axis 3 |                  | Condition data (1 to 10) |                       |                       |
|             | Axis 4 |                  | Condition data (1 to 10) |                       |                       |
| 7001        | Axis 1 | Start block 1    | Condition data (1 to 10) |                       |                       |

**Da.11** Shape

Set whether to carry out only the local "block start data" and then end control, or to execute the "block start data" set in the next point.

| Setting value | Setting details                                                                                                               |
|---------------|-------------------------------------------------------------------------------------------------------------------------------|
| 0 : End       | Execute the designated point's "block start data", and then complete the control.                                             |
| 1 : Continue  | Execute the designated point's "block start data", and after completing control, execute the next point's "block start data". |

**Da.12** Start data No.

Set the "positioning data No." designated with the "block start data".

**Da.13** Special start instruction

Set the "special start instruction " for using "high-level positioning control". (Set how to start the positioning data set in " **Da.12** Start data No.".)

| Setting value                                    | Setting details                                                                                                                                                                                                                                                                  |
|--------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 00 <sub>H</sub> : Block start (Normal start)     | Execute the random block positioning data in the set order with one start.                                                                                                                                                                                                       |
| 01 <sub>H</sub> : Condition start                | Carry out the condition judgment set in "condition data" for the designated positioning data, and when the conditions are established, execute the "block start data". If not established, ignore that "block start data", and then execute the next point's "block start data". |
| 02 <sub>H</sub> : Wait start                     | Carry out the condition judgment set in "condition data" for the designated positioning data, and when the conditions are established, execute the "block start data". If not established, stop the control (wait) until the conditions are established.                         |
| 03 <sub>H</sub> : Simultaneous start             | Simultaneous execute (output pulses at same timing) the positioning data with the No. designated for the axis designated in the "condition data".<br>Up to four axes can start simultaneously.                                                                                   |
| 04 <sub>H</sub> : Repeated start (FOR loop)      | Repeat the program from the block start data with the "FOR loop" to the block start data with "NEXT" for the designated No. of times.                                                                                                                                            |
| 05 <sub>H</sub> : Repeated start (FOR condition) | Repeat the program from the block start data with the "FOR condition" to the block start data with "NEXT" until the conditions set in the "condition data" are established.                                                                                                      |
| 06 <sub>H</sub> : NEXT start                     | Set the end of the repetition when "05 <sub>H</sub> : Repetition start (FOR loop)" or "06 <sub>H</sub> : Repetition start (FOR condition)" is set.                                                                                                                               |

Refer to CHAPTER 10 "HIGH-LEVEL POSITIONING CONTROL" for details on the control.

**Da.14** Parameter

Set the value as required for " **Da.13** Special start instruction ".

| <b>Da.13</b> Special start instruction | Setting value | Setting details                                                                                                                                      |
|----------------------------------------|---------------|------------------------------------------------------------------------------------------------------------------------------------------------------|

| Repeated start (FOR loop)              | 0 to 255      | Set the No. of repetitions.                                                                                                                          |
| Repeated start (FOR condition)         | 1 to 10       | Set the condition data No. (No. of "condition data" set to perform condition judgment)<br>(For details of the condition data, refer to Section 5.5.) |

## 5.5 List of condition data

The illustrations below show the organization of the condition data stored in the QD75 buffer memory. The condition data setting items **Da.15** to **Da.19** are explained in the pages that follow.

- Up to 10 block start data points can be set (stored) for each block No. in the buffer memory addresses shown on the left.
- Items in a single unit of condition data are shown included in a bold frame. **Da.15**
- Each axis has five start blocks (block Nos. 0 to 4).

\* For information on the organization of the buffer memory addresses assigned to the start blocks 1 to 4, refer to Appendix 13 "List of buffer memory addresses".

|                        |                                                 |              | 29119                 |                       |

The pages that follow explain the condition data setting items (Da.15 to Da.19).  
 (The buffer memory addresses shown are those of the "condition data No. 1 (block No. 7000)" for the axes 1 to 4.)

**REMARK**

To perform an high-level positioning control using block start data, set a number between 7000 and 7004 to the " [Cd.3] Positioning start No." and use the " [Cd.4] Positioning starting point No." to specify a point number between 1 and 50, a position counted from the beginning of the block.

The number between 7000 and 7004 specified here is called the "block No.".

With the QD75, up to 50 "block start data" points and up to 10 "condition data" items can be assigned to each "block No.".

| Block No. * | Axis   | Block start data | Condition                | Buffer memory         | GX Configurator-QP    |
|-------------|--------|------------------|--------------------------|-----------------------|-----------------------|

\*: Setting cannot be made when the "Pre-reading start function" is used. If you set any of Nos. 7000 to 7004 and perform the Pre-reading start function, the error "Outside start No. range" (error code: 543) will occur.

(For details, refer to Section 12.7.7 "Pre-reading start function".)

Note: If a start signal is issued against an operating axis, a record relating to this event may be output before a record relating to an earlier start signal is output.

| Default value    |                   | Storage buffer memory address (common to axes 1 to 4)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |      |      |      |      |      |      |      |      |      |      |      |      |      |      | | <b>Md.31</b> Status       | <p>This area stores the states (ON/OFF) of various flags.<br/>Information on the following flags is stored.</p> <ul style="list-style-type: none"> <li>● In speed control flag:<br/>This signal that comes ON under the speed control can be used to judge whether the operation is performed under the speed control or position control. The signal goes OFF when the power is switched ON, under the position control, and during JOG operation or manual pulse generator operation. During the speed-position or position-speed switching control, this signal comes ON only when the speed control is in effect. During the speed-position switching control, this signal goes OFF when the speed-position switching signal executes a switching over from speed control to position control. During the position-speed switching control, this signal comes ON when the position-speed switching signal executes a switching over from position control to speed control.</li> <li>● Speed-position switching latch flag:<br/>This signal is used during the speed-position switching control for interlocking the movement amount change function. During the speed-position switching control, this signal comes ON when position control takes over. This signal goes OFF when the next positioning data is processed, and during JOG operation or manual pulse generator operation.</li> <li>● Command in-position flag:<br/>This signal is ON when the remaining distance is equal to or less than the command in-position range (set by a detailed parameter). This signal remains OFF with data that specify the continuous path control (P11) as the operation pattern. The state of this signal is monitored every 0.9ms (QD75P□N/QD75D□N) or 1.8ms (QD75P□/QD75D□) except when the monitoring is canceled under the speed control or while the speed control is in effect during the speed-position or position-speed switching control. While operations are performed with interpolation, this signal comes ON only in respect of the starting axis. (This signal goes OFF in respect of all axes upon starting.)</li> <li>● OPR request flag:<br/>This signal comes ON when the power is switched ON, when the drive unit READY signal goes OFF, when the PLC READY signal goes ON, when a machine OPR operation starts. This signal goes OFF when a machine OPR operation completes.</li> <li>● OPR complete flag:<br/>This signal comes ON when a machine OPR operation completes normally. This signal goes OFF when the operation starts and when the drive unit READY signal goes OFF or PLC READY signal goes ON.</li> <li>● Position-speed switching latch flag:<br/>This signal is used during the position-speed switching control for interlocking the command speed change function. During the position-speed switching control, this signal comes ON when speed control takes over. This signal goes OFF when the next positioning data is processed, and during JOG operation or manual pulse generator operation.</li> <li>● Axis warning detection flag:<br/>This signal comes ON when an axis warning is reported and goes OFF when the axis error reset signal comes ON.</li> <li>● Speed change 0 flag:<br/>This signal comes ON when a speed change request that specifies 0 as the new speed value is issued. This signal comes OFF when a speed change request that specifies a new speed value other than 0 is issued.</li> </ul> |  |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                           |               | Axis 1                        | Axis 2 | Axis 3 | Axis 4   |    |            |   |         |   |      |    |    |    |      |    |        |   |       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | mm/min                    |               |                               |        |        |          |    |            |   |         |   |      |    |    |    |      |    |        |   |       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | inch/min                  |               |                               |        |        |          |    |            |   |         |   |      |    |    |    |      |    |        |   |       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | degree/min                |               |                               |        |        |          |    |            |   |         |   |      |    |    |    |      |    |        |   |       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | pulse/s                   |               |                               |        |        |          |    |            |   |         |   |      |    |    |    |      |    |        |   |       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | | n                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Unit                      |               |                               |        |        |          |    |            |   |         |   |      |    |    |    |      |    |        |   |       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | μm                        |               |                               |        |        |          |    |            |   |         |   |      |    |    |    |      |    |        |   |       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | inch                      |               |                               |        |        |          |    |            |   |         |   |      |    |    |    |      |    |        |   |       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | degree                    |               |                               |        |        |          |    |            |   |         |   |      |    |    |    |      |    |        |   |       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | | 0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | pulse                     |               |                               |        |        |          |    |            |   |         |   |      |    |    |    |      |    |        |   |       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                           |               |                               |        |        |          |    |            |   |         |   |      |    |    |    |      |    |        |   |       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                           |               |                               |        |        |          |    |            |   |         |   |      |    |    |    |      |    |        |   |       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                           |               |                               |        |        |          |    |            |   |         |   |      |    |    |    |      |    |        |   |       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                           |               |                               |        |        |          |    |            |   |         |   |      |    |    |    |      |    |        |   |       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                           |               |                               |        |        |          |    |            |   |         |   |      |    |    |    |      |    |        |   |       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                           |               |                               |        |        |          |    |            |   |         |   |      |    |    |    |      |    |        |   |       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                           |               |                               |        |        |          |    |            |   |         |   |      |    |    |    |      |    |        |   |       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                           |               |                               |        |        |          |    |            |   |         |   |      |    |    |    |      |    |        |   |       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                           |               |                               |        |        |          |    |            |   |         |   |      |    |    |    |      |    |        |   |       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                           |               |                               |        |        |          |    |            |   |         |   |      |    |    |    |      |    |        |   |       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                           |               |                               |        |        |          |    |            |   |         |   |      |    |    |    |      |    |        |   |       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                           |               |                               |        |        |          |    |            |   |         |   |      |    |    |    |      |    |        |   |       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                           |               |                               |        |        |          |    |            |   |         |   |      |    |    |    |      |    |        |   |       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                           |               |                               |        |        |          |    |            |   |         |   |      |    |    |    |      |    |        |   |       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                           |               |                               |        |        |          |    |            |   |         |   |      |    |    |    |      |    |        |   |       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                           |               |                               |        |        |          |    |            |   |         |   |      |    |    |    |      |    |        |   |       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                           |               |                               |        |        |          |    |            |   |         |   |      |    |    |    |      |    |        |   |       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                           |               |                               |        |        |          |    |            |   |         |   |      |    |    |    |      |    |        |   |       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                           |               |                               |        |        |          |    |            |   |         |   |      |    |    |    |      |    |        |   |       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                           |               |                               |        |        |          |    |            |   |         |   |      |    |    |    |      |    |        |   |       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
